

NOTE ON THE GREEK ECONOMY

December 12, 2025

Economic Analysis and Research Department

Recent Economic Developments: an overview

Economic activity continued to expand (2.0% y-o-y and 0.6% q-o-q) in 2025:Q3, outperforming the euro area (1.4% y-o-y and 0.3% q-o-q), despite elevated uncertainty in the international economic environment. **HICP inflation** remained elevated at 2.9% in the January-November 2025 period, leading to a wide inflation differential with the corresponding euro area figure of 2.2%, attributed to a large differential in services inflation. HICP inflation increased significantly to 2.8% in November 2025 from 1.6% in October due to increases in the components of services, unprocessed food and energy. In the **housing market**, apartment prices continued rising at a strong, though decelerating, pace in the course of 2024 and in 2025:9M. **Labour market developments** remained positive in 2025:Q3, with employment rising and unemployment falling further. The **current account deficit** widened in 2024, but it posted an improvement in the first nine months of 2025. On the fiscal front, the 2024 **primary fiscal outcome** settled at a high surplus of 4.7% of GDP, significantly larger than the 2025 Budget target (2.5%) mainly due to higher tax revenue. The **debt to GDP ratio** decreased by 10 pps in 2024 compared to 2023 to 154.2% on account of the high primary surplus, early debt repayment and notable interest-growth rate differential. **Corporate bank credit expansion** has been robust in the course of 2025 in line with economic growth and declining interest rates, while the growth rate of **private sector deposits** accelerated. **Bank lending rates** have been declining mainly for loans to firms. **Government bond yields and spreads**, during 2025 to date, have exhibited resilience amid a volatile global environment, as the impact of Greece's sovereign credit rating upgrades helped moderate the effect of rising global financial markets volatility. **Greek corporate bonds and equities** have outperformed their euro-area peers remaining less affected by the global financial market turbulence caused by the US trade policy uncertainty.

Latest economic information - available in the last four weeks

Economic Activity

Real GDP growth rose to 2.0% y-o-y in **2025:Q3** (0.6% q-o-q, ELSTAT provisional sa data) mainly driven by the pick-up in the growth rate of gross fixed capital formation (12.8% y-o-y), as well as by private consumption growth (2.4% y-o-y) and net exports' positive contribution (2.4 pp). In the **January-September 2025 period**, real GDP increased by 2.0% y-o-y.

The **ESI** decreased to 106.0 in November (from 107.5 in October) as the improvement in business expectations in the services, retail trade and construction sectors was more than offset by a decline in business expectations in manufacturing and a deterioration in consumer confidence.

The November **PMI** was at 52.7 (down from 53.5 in October) indicating a modest improvement in the manufacturing sector vs the previous month, as output increased at a decelerating pace, due to a fractional increase in new orders.

Industrial production increased by 6.4% y-o-y in October 2025 mainly due to the rise in manufacturing production (4.2% y-o-y) and electricity supply (18.2% y-o-y). In the January-October 2025 period, industrial production increased by 1.3% y-o-y (compared to 5.4% y-o-y in the respective period of 2024).

The **turnover of enterprises**, which are obliged to keep double-entry accounting, increased in October 2025 by

2.5% y-o-y, compared to an increase of 4.4% y-o-y in October 2024. In the January-October 2025 period, the turnover of enterprises of the economy as a whole increased by 2.9% y-o-y.

The volume of **building permits** increased strongly by 14.7% y-o-y in August 2025 for the fourth consecutive month reversing the declining path of the previous months which was related to the uncertainty as to the implementation of the New Building Regulation. In the January-August 2025 period, the volume of building permits declined by 8.9% y-o-y.

The **retail sales volume index** decreased by 1.7% y-o-y in September, but remained in positive territory in the January-September 2025 period (1.7% y-o-y) suggesting rising **consumption** growth.

VAT revenues at constant prices, which is an encompassing indicator for private consumption, increased by 4.7% y-o-y in October 2025 and by 5.8% y-o-y in the January-October 2025 period pointing to ongoing strong consumption growth.

Prices and real estate market

HICP headline inflation increased significantly to 2.8% in November 2025 from 1.6% in October, attributed to increases in the services inflation, unprocessed food inflation and energy inflation.

In the **housing market**, **apartment prices** continued to increase in 2025:Q3, on average, up by 7.7% y-o-y against 8.6% in 2024:Q3.

In the **commercial property market**, prime office prices increased by 4.8% y-o-y in 2025:H1, whereas prime retail prices increased by 5.2% y-o-y, over the same period.

Labour market

Employment increased by 1.8% y-o-y in 2025:Q3, while the unemployment rate stood at 8.2%.

Net flows of dependent employment in the private sector were negative by 120,019 jobs in October 2025 due to dismissals in hotels and restaurants.

External Balances, Competitiveness

In the **January-September 2025 period**, the **current account deficit narrowed y-o-y**, due to an improvement in the balance of goods and the primary income account and, to a lesser extent, in the balance of services, while the secondary income account deteriorated.

In **September 2025**, the **current account deficit narrowed**, compared with the respective month of 2024, owing to an improvement in the balance of goods and, secondarily, the primary income account, which was partly offset by a deterioration in the balance of services and, to a lesser extent, the secondary income account.

Fiscal developments

According to the **2026 Budget**, published in November, the primary balance in 2025 is projected at a surplus of 3.7% of GDP, while for 2026 a lower surplus of 2.8% of GDP is expected. Revenue overperformance, mainly due to the permanent effect of implemented reforms against tax evasion, created fiscal space for the adoption of permanent expansionary fiscal measures in 2026 at a cost 2.3% of GDP.

In January-October 2025, the **state budget primary outcome** came in at a surplus of 4.1% of GDP, against a surplus of 5.7% of GDP in January-October 2024. Compared to the annual target (according to the 2026 Budget), the primary balance over-performed by €0.4 bn due to both higher tax revenue and primary (non-investment) expenditure containment.

In January-October 2025, the **primary general government cash outcome** recorded a surplus of 5.0% of GDP, against a surplus of 6.1% of GDP in January-October 2024, mainly due to base effect from privatization revenue in 2024.

Money and Credit

In October 2025, **private sector deposits** declined by €2.1 bn in total, to stand at €206 bn. The growth rate of **bank credit** to non-financial corporations decelerated to 11.2% y-o-y, and the contraction rate of **housing loans** reached 0% for the first time since 2010.

In October 2025, **bank lending rates** declined slightly both for new corporate loans (to 3.87%, from 3.95% in September) and for new housing loans (to 3.51%, from 3.55% in September).

Financial market developments

Fitch upgraded the Greek sovereign by one notch to BBB (outlook stable); the rating decision mainly reflects country's progress on the fiscal front, and to a lesser extent, its resilient economic growth and strengthened banking sector.

Yields on Greek government bonds rose somewhat across the yield curve, in line with developments in other euro-area sovereign bonds, amid investor concerns over persistent fiscal deficits in major EA economies and a lower expectation for a rate cut by the ECB in 2026.

Greek bank senior bond yields rose in line with those of euro area peers. NBG and Piraeus Bank each issued €500 mn of senior preferred bonds in late November with the coupon rate for both banks standing at 3.38% and priced at issuance slightly below par.

Greek corporate bond yields rose, as euro area BBB average yield rose; it should be noted that Greek corporate bond yields are close to the average yield of BBB euro area non-financial corporates.

Greek equity prices rose somewhat, driven higher by a strong rise in basic materials, energy and essential consumer goods; the move came amid soft market conditions in the euro area.

*PDMA Estimates, Quarterly Debt Bulletin 119, November 2025

Economic Activity

ELSTAT 2nd estimate of the Annual National Accounts for the year 2024 and revised data for the years 2022 and 2023 point to a **lower GDP growth path in 2022-2024** (by 0.2 pp lower each year), **but to a more investment-driven path** (higher investment share).

Real GDP growth rose to 2.0% y-o-y in **2025:Q3** (0.6% q-o-q, ELSTAT provisional sa data) mainly driven by the pick-up in the growth rate of gross fixed capital formation (12.8% y-o-y), as well as by private consumption growth (2.4% y-o-y) and net exports' positive contribution (2.4 pp). **In the January-September 2025 period, real GDP** increased by 2.0% y-o-y.

Gross fixed capital formation accelerated to 12.8% y-o-y (from 1.4% y-o-y in 2024:Q3) mainly on account of a strong rise in housing and other construction investment (25.4% y-o-y and 17.9% y-o-y, respectively), as well as a strong increase in transport equipment investment (28% y-o-y).

The net exports contribution to growth was positive (2.4 pp) as exports of goods and services increased (1.7% y-o-y), while imports of goods and services declined (-4.0% y-o-y).

Soft data (PMI, ESI) point to a continuation of growth standing at high levels and remaining above euro area average.

Hard data are overall positive. Most indicators continue to move in positive territory (VAT revenues, retail sales, industrial production, tourism, employment).

Prices and real estate market

HICP inflation remained elevated at 2.9% in the January-November 2025 period, leading to a wide inflation differential with the corresponding euro area figure of 2.2%, attributed to a large differential in services inflation. HICP inflation increased considerably to 2.8% in November 2025 from 1.6% in October, attributed to increases in services inflation, unprocessed food inflation and energy inflation.

Both **housing and commercial property prices** (prime office and retail) increased at a strong pace in 2024, due to both external and internal demand, while this upward trend persists during 2025. In the housing market, in 2025:9M, **apartment prices** continued to increase at a strong, though decelerating, rate (7.5% y-o-y compared to 9.7% y-o-y in the corresponding period of the previous year). In the **commercial real estate sector**, prime office prices increased by 4.8% y-o-y in 2025:H1, while prime retail prices increased by 5.2% y-o-y over the same period.

Labour market and costs

Total employment growth remained positive in 2025:Q3 largely due to higher demand for labour in the construction, retail trade, tourism and professional services sectors. **The unemployment rate** in 2025:Q3 decreased by 0.8 pp compared to 2024:Q3. LFS monthly data for October 2025 show an increase in employment growth, while the unemployment rate (sa) decreased marginally compared to the previous month.

Net flows of dependent employment in the private sector were positive in the January-October 2025 period and higher compared to the corresponding period of 2024. In October 2025, net flows were negative (-120,019 jobs) due to dismissals in hotels and restaurants.

Compensation of employees increased by 7.3% y-o-y in 2025:Q3 (compared to 6.9% y-o-y in 2024:Q3) due to a rise in both compensation per employee (4.0% y-o-y) and the number of employees (3.1% y-o-y).

External Balances, Competitiveness

In the **January-September 2025 period**, the **current account deficit narrowed y-o-y**, due to an improvement in the balance of goods and the primary income account and, to a lesser extent, in the balance of services, while the secondary income account deteriorated.

In **September 2025**, the **current account deficit narrowed**, compared with the respective month of 2024, owing to an improvement in the balance of goods and, secondarily, the primary income account, which was mostly offset by a deterioration in the balance of services and, to a lesser extent, the secondary income account.

The appreciation of the **nominal effective exchange rate** continued in 2025:Q3. The **unit labour cost competitiveness index**, which has started improving since the second half of 2024, improved further in 2025:Q2, however at a lower pace, despite the wage increases. The **price competitiveness index** continued to deteriorate in 2025:Q3 due to the euro appreciation despite the still favourable for Greece price differentials.

Fiscal developments

The **general government primary outcome** in 2024 (4.7% of GDP) **was confirmed among the highest in the EU and the debt ratio decreased significantly** (by 10.1 pps to 154.2% of GDP). Revenue overperformance in recent years has created fiscal space allowing for permanent expansionary measures. Accordingly, the primary balance in 2025 is projected at a surplus of 3.7% of GDP (higher than the MTF5 target and Annual Progress report estimate) and at a surplus of 2.8% of GDP in 2026. Meanwhile, the net expenditure path projected for 2025-26 ensures that the debt to GDP ratio is put on a credible and sustainable downward path.

Money and Credit

The growth rate of **private sector deposits** has accelerated during 2025 under the positive impact of robust economic growth and strong corporate bank credit expansion. During the last few years, the recorded shift of household funds into alternative financial assets than bank deposits due to the low level of deposit rates attenuated the growth rate of household deposits.

Corporate bank credit growth remained strong in the course of 2025 consistent with underlying economic growth and declining interest rates. The contraction rate of **housing loans to households** has decelerated significantly during 2025, as positive net flows have continued to be recorded for several months since December 2024, for the first time since mid-2010.

In line with ECB policy rate cuts, **bank lending rates** continued to decline during 2025, mainly for loans to firms and to a lesser extent for loans to households.

Financial markets

The developments in Greek sovereign and bank ratings have been positive, with further rating upgrades taking place in 2025. This is the result of sustained overperformance of the Greek economy in the fiscal and economic activity fronts, which also fosters the prospect of further rating upgrades.

Greek government bond yields in 2025-to-date have risen, as have other euro-area sovereign bond yields; yield differentials to EA benchmark sovereign bonds have narrowed, as GGBs have benefitted from a portfolio rebalancing in favour of EA assets since April 2025.

Greek bank and corporate bond yields have overperformed, in 2025, vis-à-vis their EA counterparts belonging to investment grade.

Greek shares have posted a strong positive return in 2025-to-date, supported by robust economic growth and good prospects of the economy.

Supportive EU and ECB policies and measures

More than €30 bn are expected to flow into the Greek economy from the EU in the next three years (2025-2027) from a total entitlement of €70 bn (2021-2027) half of which are related to the EU Recovery Plan (NGEU), while the rest is structural funds from the EU budget 2021-2027.

NGEU funds are targeted at growth-enhancing high value-added projects in the areas of energy saving, the transition to green energy, the digital transformation of the public and the private sector, employment, social cohesion and private investment.

According to BoG estimates, full execution of the **EU Recovery Plan** will contribute to a significant increase of 7% in real GDP by 2026, primarily due to the increase in total investment and total factor productivity. At the same time, it will contribute to the increase of employment, private investment, exports and tax revenue.

The implementation of the reforms associated with the NGEU is projected to bring about a permanent increase of real GDP and total factor productivity (in the course of ten years).

Key Challenges

Short-term economic policy challenges:

- Controlling inflation.
- Accelerating investment, in part by mobilizing available European resources.
- Addressing emerging labour market shortages and skills mismatch.
- Designing climate adaptation strategies and disaster preventive measures.
- Ensuring energy security through investment in clean energy.
- Maintaining fiscal sustainability.

Medium to long-term economic policy challenges:

- Maintaining primary surpluses over an extended horizon to ensure public debt sustainability.
- Implementing structural reforms to support long-term growth.
- Addressing the current account deficit through the strengthening of the Greek economy's competitiveness.
- Stepping up the pace of the privatisation and reforms programme and continuing to improve the management of state assets in order to attract foreign direct investment.
- Promoting innovation, education and knowledge-based capital.

Source: ELSTAT

Economic activity continued growing in 2025:Q3 mainly supported by gross fixed capital formation, private consumption and net exports.

ELSTAT 2nd estimate of the Annual National Accounts for the year 2024 and revised data for the years 2022 and 2023 point to a lower GDP growth path in 2022-2024 (by 0.2 pp each year), but to a more investment-driven path (higher investment share). In particular, according to **ELSTAT 2nd estimate of Annual National Accounts, real GDP increased by 2.1% in 2024** (compared to 2.3% in the first estimate), **but the investment share rose to 16% of GDP**, from 15.3% in the first estimate.

Real GDP growth rose to 2.0% y-o-y in **2025:Q3** (0.6% q-o-q, ELSTAT provisional sa data) mainly driven by the pick-up in the growth rate of gross fixed capital formation (12.8% y-o-y), as well as by private consumption growth (2.4% y-o-y) and net exports' positive contribution (2.4 pp). **In the January-September 2025 period, real GDP** increased by 2.0% y-o-y.

Gross fixed capital formation accelerated to 12.8% y-o-y (from 7.6% y-o-y in 2025:Q2) on account of a strong rise in housing and other construction investment (25.4% y-o-y and 17.9% y-o-y, respectively) as well as a strong increase in transport equipment investment (28% y-o-y).

The net exports contribution to growth was positive (2.4 pp) as exports of goods and services increased (1.7% y-o-y), while imports of goods and services declined strongly (-4.0% y-o-y) mainly due to the fall in imports of goods (-5.0% y-o-y).

Output (as measured by gross value added) increased in 2025:Q3 mainly due to the positive contribution of the services, construction and industrial sectors (0.8 pp, 0.6 pp and 0.3 pp, respectively).

The savings of the non-financial private sector (measured as a four-quarter moving sum) **continued their downward trajectory**, reaching 5.9% of GDP in 2025:Q1, compared to 7.1% in 2024.

Household dissaving deepened in 2025:Q1 (-2.6% of GDP) compared to 2024 (-1.7%), as the growth rate of disposable income (0.2%) lagged the increase of consumption (1.5%) (q-o-q in a 4-quarter moving sum). The buoyant consumer spending alongside the repayment of tax obligations exerted considerable downward pressure on household savings, pushing them further into negative territory. Notably, household dissaving

surpassed its pre-pandemic average of -2.0%. The wealth effect from gains in equity and real estate prices has played a significant role in explaining this phenomenon. In 2025:Q1, **household financial wealth reached a new all-time high** of €365.2 bn, supporting consumption and thereby encouraging dissaving.

NFC's savings (retained earnings) remained robust at 8.5% in 2025:Q1 and above their 2016–2019 average of 7.7%. This trend reflects the strong performance of the tourism, construction, and industry sectors, as well as the broader economy, in a stable political and macroeconomic environment, alongside disbursements from the Recovery and Resilience Facility (RRF), despite rising labour costs.

Nominal **disposable income of households** increased by 0.7% y-o-y in 2025:Q1 due to the positive contribution of labour income, i.e. compensation of employees and self-employed income, while real disposable income of households declined by 3.3 y-o-y reflecting the effect of elevated inflation.

Sources: ESI, Consumer confidence (European Commission), PMI (Markit Economics), Industrial production, Manufacturing production, Turnover of Enterprises, Building permits, Retail sales, New car registrations (ELSTAT), VAT revenues (Ministry of Finance), Services production index (Eurostat), Frontier Survey of the Bank of Greece (for tourist arrivals and travel receipts).

* Data deflated with CPI.

Soft data stand at high levels pointing to a continuation of growth and remaining above euro area average.

The **ESI** decreased in November as the improvement in business expectations in the services, retail trade and construction sectors was more than offset by a decline in business expectations in manufacturing and a deterioration in consumer confidence.

The November **PMI** indicated a modest improvement in operating conditions in the manufacturing sector, as output continued rising, though at a decelerating pace, due to a fractional increase in new orders; growth in new orders waned due to lower client purchasing power and a fall in new export orders. Nonetheless, firms stepped up their hiring and input buying, in part due to stockpiling efforts and supply chain disruptions placing strains on capacity. On the prices front, rates of input cost and output charge inflation slowed, with firms raising their selling prices only fractionally to stimulate demand.

Hard data are overall positive.

Industrial production, following its strong performance in 2024, increased by 1.3% y-o-y in the January-October 2025 period mainly due to the rise in manufacturing production. In October 2025, industrial production strongly increased largely due to a rise in manufacturing production and electricity supply.

Manufacturing production strongly increased in October 2025 on account of a rise in production particularly in the “food”, “coke and refined petroleum products”, “basic pharmaceutical products” and “machinery and equipment” sectors.

The **turnover of enterprises**, which are obliged to keep double-entry accounting, increased in October 2025 by 2.5% y-o-y, compared to an increase of 4.4% y-o-y in October 2024.

The volume of **building permits** strongly increased in August 2025 for the fourth consecutive month reversing the declining path of the previous months, which was related to the uncertainty as to the implementation of the New Building Regulation. In the January-August 2025 period, the volume of building permits declined by 8.9% y-o-y.

VAT revenues at constant prices, which is an encompassing indicator for private consumption, increased in October 2025 and in the January-October 2025 period pointing to ongoing strong consumption growth.

The retail sales volume index decreased in September, but remained in positive territory in the January-September 2025 period suggesting rising consumption growth.

New private passenger car registrations increased in October 2025 and in the January-October 2025 period pointing to rising consumer spending.

Greece continued to record the highest annual increase in the **services production index** in the EU in September 2025, and by a wide margin —18.9% compared to the EU average of 2.8% and 2.7% in the euro area— with accommodation and food services leading the way. Specifically, the accommodation and food services sector saw an increase of 63.8% y-o-y in September, compared to just 1.5% y-o-y in the EU.

Travel receipts (at nominal prices) rose by 9.0% in the period January-September 2025, reaching €20.1 bn, despite a 3.6% decline in the September revenue. **Tourist arrivals** reached 31.6 mn travelers in the first nine months of the year, marking a 4.0% y-o-y increase. At constant prices, travel receipts increased by 6.2% y-o-y over the same period. Despite September's slowdown, Greece's tourism sector is expected to remain on track for a strong 2025 performance.

International arrivals at Greek airports showed a 5.7% y-o-y increase in the period January-October 2025, while international arrivals at the Athens International Airport surged by 8.5% in the period January-November 2025.

Sources: ELSTAT and Bank of Greece computations.

HICP headline inflation stood at 2.9% on average in the January-November 2025 period, having been shaped mainly by elevated services inflation figures in the first eight months of the year. The large inflation differential with the euro area inflation during the first eight months of 2025 has been slashed because of the low inflation figures for Greece in September and in October 2025.

HICP headline inflation increased significantly to 2.8% in November 2025 from 1.6% in October, due to increases in the inflation rates of services, energy and unprocessed food.

Core inflation (HICP excluding energy and food) also increased significantly to 3.2% in November, from 1.9% in October, due to a major increase in services inflation.

PPI inflation for the domestic market was on average negative in 2024 (-2.4%). In January 2025, it turned positive and remained in positive territory in the first eight months, turning slightly negative in September. On average, in the first ten months of 2025, PPI inflation stood at 2.7%.

Import price inflation, in the course of 2024, oscillated in line with import energy inflation and overall remained in negative territory (-2.0%). In the January-October 2025 period, it remained on average in negative territory (-2.5%) moving in line with developments in energy inflation.

Domestic price pressures, as captured by changes in GDP deflator, had started increasing in 2021 and picked up further in 2022 and 2023. Up to mid-2023, unit profits had contributed the largest share of the increase in the GDP deflator showing that firms had managed to pass on cost shocks associated with the surge in energy and other intermediate production prices to final prices. In 2024 and in the January-September 2025 period, the GDP deflator remained relatively elevated largely on account of the rise in unit labour costs.

Sources: Bank of Greece, ELSTAT.

Real estate prices are still growing.

In 2024, **housing property prices** increased at a strong pace and continued on an upward trend in the nine months period of 2025 due to both external and internal demand. Prime locations and investment characteristics property are leading the market.

Apartment prices (in nominal terms) further increased in 2025:Q3 by 7.7% y-o-y. Broken down by property age, in 2025:Q3, a stronger rate of increase was recorded in old apartment prices (over 5 years old) compared with the corresponding increase in new apartment prices (8.5% and 6.6%, y-o-y, respectively). By geographical area, the average annual growth in Thessaloniki was 9.6% y-o-y and in Athens 6.6% y-o-y.

Residential investment (ELSTAT data, seasonally adjusted at constant prices) increased by 25.4% y-o-y in 2025:Q3 and stood at 3.3% as a percentage of GDP.

With **housing affordability** emerging as a critical issue, new government initiatives are currently in progress or have been announced, including: i. “My Home II” program which provides financial support for the acquisition of prime residence from the NRRP funds, ii. The rent reimbursement program, which provides refund of a single monthly rent to eligible tenants based on income criteria and iii. The intention to redevelop and introduce suitable publicly owned real estate assets to a social housing scheme, with the participation of the private sector.

In 2025:H1, **prime office prices** increased by 4.8% y-o-y and **prime retail prices** increased by 5.2% y-o-y. An increase was also recorded in both office and retail rents, by 1.3% and 2.6% y-o-y, respectively.

Based on the Commercial Property Market Survey, conducted by the Bank of Greece, in 2025:H1 **prime office yields** ranged between 5.4% and 6.6%, slightly lower compared to the previous half-year, while the corresponding **prime retail yields** ranged between 5.0% and 6.0%.

4. Employment Expectations Index	114.7	111.4	113.2	116.8	113.7	113.5	115.4	114.3	111.5	113.1	113.5
5. Labour Costs											
- Compensation per employee (nominal) (% y-o-y)	5.8	4.8	3.8	4.1	4.0
- Compensation per employee (real) ² (% y-o-y)	3.6	2.2	-0.1	0.2	0.6
- Labour productivity (% y-o-y)	1.1	1.4	1.3	0.9	0.8
- Unit labour cost (% y-o-y)	4.6	3.4	2.5	3.1	3.2

1 Monthly and quarterly LFS data are not compatible due to the different survey samples. Unemployment rate on an annual and quarterly frequency is based on non seasonally-adjusted data, while monthly unemployment rate is based on seasonally-adjusted data.

2 Compensation per employee (real) is deflated by the private consumption deflator.

Sources: ELSTAT (Labour Force Survey and Labour Costs), Ministry of Labour and Social Security (ERGANI Information System), Public Service of Employment (Registered unemployed), European Commission (Employment Expectations Index).

Labour market developments remain positive, with employment rising and unemployment falling, but there are challenges related to labour market tightness.

Total employment rose in 2025:Q3, mainly due to employment growth in construction, retail trade, tourism, and professional services sectors. Latest monthly LFS data suggest that employment continued growing in October 2025.

The **unemployment rate** decreased in 2025:Q3 by 0.8 pp compared to 2024:Q3. The share of long-term unemployed increased by 2.2 pp. In October 2025, the unemployment rate (sa) declined slightly compared to the previous month.

Dependent employment flows in the private sector (Ministry of Labour, ERGANI Information System) were positive in the January-October 2025 period and higher compared to the corresponding period of 2024. In October 2025, dependent employment net flows in the private sector were negative due to dismissals in hotels and restaurants.

The number of registered unemployed (DYPA data) decreased in October 2025 due to a decline in the number of both long-term and short-term unemployed. The number of those receiving unemployment benefits decreased compared to the previous month.

The **Employment Expectations Index** (European Commission) increased in November 2025 compared to October 2025, due to an improvement of employment expectations in construction and retail trade sectors.

Regarding the **tightness in the labour market**, its upward trend continued in 2024; however, in the last quarters of 2024 and in the two first quarters of 2025 there are signs of easing. In 2025:Q2 the job vacancy rate reached 1.6%, from 2.5% in 2024:Q2. The highest vacancy rates were recorded in construction, professional, scientific and technical activities, as well as in trade, accommodation and food service activities sector.

Labour costs are rising.

Compensation per employee (nsa) increased by 4.0% y-o-y in 2025:Q3 as compensation of employees increased by 7.3%, while the number of employees (national accounts definition) increased by 3.1%.

Real compensation per employee (nsa) increased by 0.6% y-o-y in 2025:Q3 as the private consumption deflator increased less than nominal compensation per employee (3.4% and 4.0% respectively).

Unit Labour Costs (ULC) increased in 2025:Q3, marginally higher compared to the previous quarters of 2025, as real labour productivity declined slightly.

Outlays for the remuneration of employees in the general government (incl. social security contributions) rose by 3.0% y-o-y in the January-October period of 2025. They had risen by 6.0% in 2024 as a whole.

According to annual accounts data from the **ERGANI information system**, the average monthly earnings stood at €1,342 in 2024, increasing by 7.3% compared to 2023. Accordingly, the number of employees earning more than €900 per month increased. In particular, compared to 2023, the number of employees with salaries between €901-1200 per month increased by 16.7%. Also, reflecting the rise of the minimum wage to €830, the share of employees earning less than €800 per month (gross) fell to 17.8%, from 30.9% in 2022.

Source: ELSTAT, Labour Force Survey.

Chart 19: Nominal ULC growth and components

Source: ELSTAT, National Accounts.

Note: Labour productivity is real GDP (2020 prices) per employed persons. Compensation per employee is compensation of employees divided by the number of employees (national accounts definition).

Collective wage agreements

In the **January-October 2025 period**, **170 new firm-level agreements were signed**, covering 88,208 employees; of these, 73 agreements provided for wage increases, whereas the rest did not provide for any wage changes. In 2024, 238 new firm-level agreements were signed, covering 171,161 employees; of these, 82 agreements provided for wage increases, whereas the rest did not provide for any wage changes.

Recent selected wage agreements:

In July 2025, a **three-year agreement for employees in private insurance enterprises** provided for a 4.0% wage increase as of 1 Jan. 2025, a 3.0% as of 1 Jan. 2026 and a 2.0% as of 1 Jan. 2027.

In April 2025, a **three-year agreement for banks** provided for increases of 2% as of 1 Jul. 2025, 2.0% as of 1 Dec. 2025, 2.0% as of 1 Dec. 2026 and 2.0% as of 1 Dec. 2027.

In February 2025, a **two-year agreement for hotel employees** provided for a 5% wage increase as of 1 Jan. 2025 and a 3.0% as of 1 Jan. 2026.

According to a decision signed by the Minister of Labour on 29 April 2024, the coverage of the branch **collective agreement in private insurance enterprises** was extended to all employees in the sector.

Minimum wages

The statutory minimum wage rate increased by 6.0% as of 1 April 2025, bringing the minimum monthly salary to €880. Previous minimum wage increases: in 2024 (6.4%), in 2023 (9.4%), in 2022 (9.5%), in 2019 (11%). **Overall, since end-2018, the minimum wage increased by a total of 50.2%.**

On December 5, 2024, a law was voted that incorporates the European Directive 2022/2041 on adequate minimum wages in the European Union and introduces a new way of calculating the statutory minimum wage and minimum daily wage. The new calculation method will apply from 2028 and the minimum wage will cover all private and public sector employees. In particular, the minimum wage and the minimum daily wage are adjusted, after consultation conducted every year, based on a rate resulting from the sum a) of the annual rate of change in the consumer price index between July 1 of the previous year and June 30 of the current year for the lower twenty percent (20%) of the household income distribution and b) half of the annual percentage change in the purchasing power of the general wage index over the same time period. Also, the law introduces provisions to strengthen the role of social partners in the wage determination process, as well as regulations to strengthen collective bargaining.

Labour market policies

As of July 1, 2024, the **digital work card** in industry and retail is fully implemented. Gradually, the application of the measure will be extended to all businesses in the country. As of November 3, 2025, the digital work card will be fully implemented in the sectors of wholesale trade, energy, financial companies, as well as administrative and support activities in tourism.

At the same time, **the possibility of declaring and applying six-day work** has been activated in businesses that by their nature are in continuous operation and in those that already operate on a 24-hour basis five or six days a week. The possibility of six-day work was established by articles 25 and 26 of Law 5053/2023 with the aim of combating undeclared work and also increasing the income of employees, since their daily wage for the 6th day is increased by 40%.

From January 1, 2025, insurance contributions have been reduced by 1 percentage point (0.5 percentage points in employee contributions and 0.5 percentage points in employer contributions), which will contribute to strengthening the competitiveness of Greek businesses and maintaining jobs.

The new labour law (L.5239/17.10.2025) includes provisions aimed at modernizing labour regulations, easy and quick recruitment, reducing bureaucracy, strengthening health and safety at work, strengthening the Labour Inspectorate, harmonizing the Greek labour law with the international conventions of the International Labour Organization (ILO), while various new social security provisions are also included.

In particular, among other things, the following are included: a) extension of the possibility of 13-hour employment with one employer and the legalization of overtime in intermittent jobs with a 40% increase in the hourly wage paid, b) simplification of recruitment procedures and possibility of fast-track recruitment for work of up to 2 days, c) possibility of four-day work for working parents for the entire year and distribution of annual leave over several periods of time, d) tax-free parental leave allowance, uniform recognition of insurance time for pregnancy and childbirth allowance and extension of the maternity leave to foster mothers, e) optimization of the operation of the Labour Inspectorate and stricter sanctions for obstructing control by the Labour Inspectorate, f) extension of the exemption of surcharges from insurance contributions.

To increase the coverage of employees by collective labour agreements, a social agreement was signed between the government and the social partners' national social organizations on 26.11.2025. The main axes of the agreement are the facilitation of the extension of collective bargaining agreements, the full protection of employees after the expiration of the wage agreement, and the acceleration of dispute resolution procedures through the mediation and arbitration organization (OMED).

Source: Bank of Greece

In January-September 2025, the current account deficit narrowed.¹

In the **January-September 2025 period**, the **current account deficit narrowed y-o-y**, due to an improvement in the balance of goods and the primary income account and, to a lesser extent, in the balance of services, while the secondary income account deteriorated.

Real exports of non-fuel goods increased, while fuel exports declined. Food, beverages and tobacco and to a lesser extent chemicals and basic metals contributed to the increase in non-fuel exports.

Real imports of non-fuel goods recorded an increase mainly driven by imports of consumer (mainly non-durable) as well as transportation equipment and industrial goods.

The surplus of the **services balance** posted an increase because of the improvement in the net travel services balance, which was partly offset by the deterioration in the transport and other services balances. **Non-residents' arrivals** and **receipts** increased by 4.0% y-o-y and by 9.0% y-o-y, respectively.

The **transport surplus** posted a decrease. Freight rates (based on the ClarkSea Index) decreased by 0.6% y-o-y; dry bulk rates decreased by 19.6% y-o-y and tanker rates by 21.0% y-o-y.

In the **January-September 2025 period**, **FDI inflows** amounted to €8.6 bn including the corporate reorganisation of Metlen Energy & Metals. They are reflecting mainly investments in new shares and real estate. The most attractive sectors of economic activity, apart from manufacturing, were transportation and construction. Real estate activities (management and private sales) have lost momentum compared to the relative period of the previous year.

In **September 2025**, the **current account deficit narrowed**, compared with the respective month of 2024, owing to an improvement in the balance of goods and, secondarily, the primary income account, which was partly offset by a deterioration in the balance of services and, to a lesser extent, the secondary income account.

¹ Balance of Payments and International Investment Position data have been revised from 2013 onwards, following the implementation of EUROSTAT's decision No 6577784/17.09.24, which requires the inclusion of the deferred interest on EFSF loans in the stock of debt.

The goods deficit narrowed as exports increased and imports decreased. In real terms, both **exports and imports of non-oil goods** increased.

The surplus of the **services balance** contracted, due to a deterioration in all its components, mainly the travel balance. **Non-residents' arrivals** increased by 3.6%, while travel **receipts** decreased by 3.6% y-o-y.

EU funds

In January-September 2025, Greece received €1.6 bn and €2.3 bn from **structural funds** and **farmers' subsidies**, respectively.

The implementation of the **Multiannual Financial Framework (MFF)** 2021-2027 has already started, though still at a slow pace. According to EU data (as of December 1, 2025), €4.2 bn have been disbursed since the beginning of the program.

Regarding the **Recovery and Resilience Facility (RRF)**, €12.0 bn in grants and €11.4 bn in loans have already been received by Greece since 2021 (NGEU including REPowerEU). On January 25, 2024 Greece received €158.7 mn as pre-financing under REPowerEU. On July 24 and October 16, 2024 the country received €3.3 bn in RRF loans and grants combined, whereas on May 2, 2025, €1.3 bn in RRF grants and €1.8 bn in RRF loans were disbursed, having completed the related milestones and targets. On that note, on November 4, 2025 Greece submitted a modified version of Recovery and Resilience Plan², while the sixth payment request for €2.1 bn in RRF grants was disbursed on November 26, 2025.

² On May 15, 2025 Greece had submitted a modified version of Recovery and Resilience Plan, which the EU Commission positively assessed on June 30, 2025.

Source: ECB

1: + appreciation of euro

2: + deterioration of competitiveness

Cost competitiveness gains remain thanks to lower ULC level vis-à-vis the main Greece's trading partners. However, euro's appreciation led to losses in cost competitiveness in 2025:Q2 & 2025:Q3.

The nominal effective exchange rate: Based on ECB Harmonised Competitiveness Indicators (HCIs), the nominal effective exchange rate (NEER) for Greece continued to appreciate further, although at a decreasing growth rate, due to the appreciation of the euro. However, a stronger appreciation was recorded in 2025:Q3.

Labour cost competitiveness: ULC-based competitiveness having improved significantly in 2022-2023, mainly driven by strong gains in productivity relative to Greece's main trading partners, posted a small deterioration in 2024, negatively affected by the strong appreciation of the nominal effective exchange rate. In 2025:Q2, the improvement in labour cost competitiveness shrank due to larger appreciation of the NEER, which however did not fully offset the favorable for Greece ULC differential despite the wage increases.

Price competitiveness: the deterioration in price competitiveness registered in 2023 continued, though at a decelerating rate, in 2024, as the impact of the significant nominal appreciation was only partly offset by Greece's lower inflation relative to its main trading partners inside and outside eurozone. However, the larger appreciation of the euro in 2025:Q3 resulted to a further deterioration in addition to negative price differentials for Greece.

Non-price or structural competitiveness

Non price/structural competitiveness indices recently published provide a rather positive picture as progress in some areas is evident, namely in the tax wedge front, government performance, business efficiency and digital transformation of the economy.

Latest publications

Indicator	International Organization	Date published	Latest Ranking (Total countries)	Previous Ranking (Total countries)	Positions Moved
World Competitiveness Ranking	IMD	17.06.2025	50 (69)	47 (64)	-3
	Greece's ranking fell by 3 positions along with same magnitude drop in our peer groups ranking. Improvement was recorded in the sub-index of domestic economy (up to 46th from 53rd) and international investment (up to 52nd from 55th), while deterioration was recorded in employment (down to 60 th from 47 th), productivity & efficiency (down to 50th from 37th) and attitudes & values (down to 47th from 36th). According to IMD, the main challenges for Greece now include: the need for reform in the labor market through VET policies in order to meet labor shortages and skills mismatches in critical sectors, promote job-generating investments in the manufacturing sector, increase the resilience of the economy, improve the efficiency of justice system (especially by reducing the length of proceedings of commercial disputes), introduce policies that facilitate the twin transition (green and digital) of enterprises, with a special focus on energy and reduce the administrative burden on enterprises.				
Tax International Competitiveness Index	Tax Foundation	21.10.2025	23 (38)	26 (38)	+3
	Greece's rank improved by three places and its overall absolute rank raised by 4.1 points as its personal, consumption and corporate taxes ranking improved, while property taxes and cross border tax rules ranking deteriorated. Strengths: The net personal tax rate of 5 percent on dividends is significantly below the OECD average of 24.7 percent; corporate income tax rate of 22 percent is below the OECD average of 24.2 percent; controlled foreign corporation rules in Greece are modest. Weaknesses: Companies are severely limited in the amount of net operating losses they can use to offset future profits; companies cannot use losses to reduce past taxable income; and VAT rate is one of the highest in the OECD applied to one of the narrowest bases, covering only 43 percent of final consumption.				

5. FISCAL DEVELOPMENTS

Table 5.1: General Government fiscal outlook (% of GDP)

Public Debt	154.2*	145.9	138.2	131.7	124.6	119.0
Net nationally financed primary expenditure (growth rate)	-0.2	4.4	5.7	2.9	2.7	2.4

Sources : ELSTAT (*) and Ministry of Finance.

Notes : (a) The debt projections of the Medium-term fiscal structural plan are not presented as they are not consistent with the methodological change in the recording of public debt introduced in the 2nd EDP Notification of 2024 (22.10.2024).

(b) Net nationally financed primary expenditure is defined as government expenditures minus (1) interest expenditures, (2) programs financed by the EU, (3) national contribution to programs financed by the EU, (4) cyclical elements of unemployment benefit expenditures, (5) one off expenditure and (6) increases in net revenue attributable to discretionary revenue measures.

The general government outcome in 2024 was confirmed among the highest in the EU and the debt ratio decreased significantly

The 2024 general government balance, as published in the context of the 2nd EDP notification (21.10.2025), turned to a surplus of 1.2% of GDP, higher than the pre-pandemic level. Also, the **general government primary outcome** recorded a surplus of 4.7% of GDP (marginally lower than 4.8% of GDP published in the 1st EDP notification) mainly on account of higher tax revenue as well as primary expenditure containment. The debt decreased by €4.1 bn and the debt to GDP ratio decreased by 10.1 pps of GDP (lowest ratio since 2010 and highest decrease among EU27 countries).

Stronger discretionary revenue performance in 2025 created fiscal space for expansionary permanent fiscal measures which are expected to boost economic activity.

According to the **2026 Budget**, which was published in November 20, the primary balance in 2025 is projected at a surplus of 3.7% of GDP (against a target of 2.4% of GDP in the 2025 Budget and an estimate of 3.2% of GDP in the Annual Progress Report for the year 2025), while for 2026 a lower surplus of 2.8% of GDP is expected (higher than the target of 2.4% of GDP in the 2025-28 MTFS). Furthermore, according to the Multi-Annual Fiscal Programme, steady primary surpluses of 2.7% are foreseen for 2027-2029. Revenue overperformance mainly due to the permanent effect of implemented reforms against tax evasion, created fiscal space for the adoption of permanent expansionary fiscal measures, some of which take effect as of 2025 and include: (i) the residential rent subsidy (€0.23 bn), (ii) economic support to low pensioners (€0.36 bn), (iii) increased public investment (€0.5 bn), (iv) the revised personal income tax schedule with an estimated cost of €1.2 bn in 2026, and €1.6 bn in 2027, (v) wage increases in armed forces and civil defence with a permanent cost of €0.3 bn as of 2026, (vi) additional pension expenditure of €0.2 bn by 2027. The total cost of measures amounts to 1.2% of GDP in 2025 and 2.3% of GDP in 2026.

Fiscal policy in the years 2025 and 2026 is estimated to be expansionary mainly due to the increased expenditure on investments through the RRF as well as fiscal loosening.

Furthermore, the net expenditure path ensures that the fiscal outcome satisfies the deficit resilience margin criterion in the medium term and that the debt-to-GDP ratio is put on a credible and sustained downward path up to 2029. Despite the fact that the annual rates of change of net primary expenditure in the period 2025-26 are projected to be higher than those foreseen in the MTFS, the cumulative increase in the level of specific expenditure corresponds to the limit set by the MTFS 2025-2028, as active measures to reduce tax

evasion and the activation of the national escape clause for defense spending³ increase the margin for spending increases.

RRF funds are being absorbed yet backloading is witnessed

Absorption: Greece is progressing well compared to peers regarding the **RRF receipts based** on the successfully completion of the respective **milestones and targets**. Greece received the sixth payment of €2.1 bn in grants, while the payment claim for the respective loan part has been postponed. Overall, Greece has so far received €23.4 bn from the RRF (€12 for grants and €11.4 for loans), that is 65% out of the total envelop of €36 bn (being among the 6 countries above EU average), having successfully completed 48% of the total landmarks.

Execution: The **loan component** (signing of contracts) progress slowed down in the recent months and the **grant component** (payment execution) has become more backloaded than originally projected mainly due to administrative burden heavier than originally anticipated, as also witnessed in most EU countries. More specifically:

Grants: Out of a total envelope of €18.2 bn, cash receipts from the EU amount to €12.0 bn. Until June 2025 €6.6 bn had been disbursed to the final beneficiaries. Another €5.4 bn had been transferred from the state to other entities inside and outside the general government until November 2025.

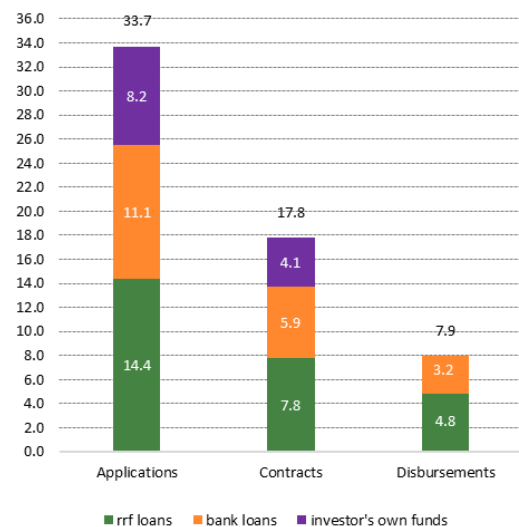

Loans: Out of a total envelope of €17.7 bn, cash receipts from the EU amount to €11.4 bn. Until November 2025 €4.8 bn had been disbursed to the final beneficiaries. The contracted projects amount to €7.8 bn.

Chart 28: RRF funds
(€ bn)

Source: Ministry of Finance

Chart 29: RRF loans with leverage
(€ bn – up to Oct 2025)

³ In March 2025, the European Commission communicated its decision to accommodate member states' increased defence expenditure within the Stability and Growth Pact. More specifically, member states have the option to temporarily increase military expenditure by up to 1.5% of GDP per year (compared to its GDP share of 2021) during the four years 2025-2028 without violating the fiscal rules. For countries with lower defence spending in 2024 compared to 2021 (as in the case of Greece), the reference year will be 2024. In April 2025, Greece submitted a claim for the activation of the national escape clause to unlock additional flexibility for higher defence expenditure in 2026. In particular, the projected increase in defence expenditure by around 0.3% of GDP in 2026 relative to 2024 is proposed to be exempted from the fiscal rules.

Annual General Government figures – ESA 2010 (2024) – Improvement and overachievement

Table 5.2: General Government (% GDP) - ESA 2010

	Annual						
	2021	2022	2023	2024	2024 Q1-Q2	2025 Q1-Q2	2025 Q1-Q3*
Balance	-7.2	-2.6	-1.4	1.2	-0.4	0.6	
Primary balance	-4.8	-0.1	2.0	4.7	1.3	2.2	
Revenue	49.5	50.5	48.2	49.5	22.1	22.7	
Primary expenditure	54.3	50.6	46.2	44.8	20.7	20.5	
Public debt (stock)	197.3	177.8	164.3	154.2	156.0	148.2	148.0
Public debt (stock, million euro)	364,141	368,005	369,110	364,965	369,406	368,609	368,000
General government cash reserves (EUR mn)		31,523	33,624	36,281	35,663	41,936	45,784

Sources: ELSTAT, *PDMA estimates, Quarterly Debt Bulletin 119, November 2025

According to the 2nd EDP notification (21.10.2025), **both the general government balance and the primary balance were marginally lower compared to the 1st notification and marked an improvement in 2024 relative to 2023**, turning into a surplus and recording a significant primary surplus respectively as a share of GDP, overshooting the annual target, largely as a result of satisfactory growth in the economy as well as tax evasion containment.

The improvement in the **primary balance** jointly reflects a decrease in the share of primary expenditure as a % of GDP (by 1.5 p.p.) and an increase in the share of revenue (by 1.3 p.p.). Y-o-y, primary expenditure increased by 2.0%, mainly driven by an increase in capital transfers (16.5%) largely due to the recapitalization of Attica Bank (€523 mn) as well as by higher compensation of public sector employees (+4.5%) due to the reformed civil servant wage grid and higher social payments (+0.7%) due to pension indexation and pension arrears clearance. In the opposite direction, there was a decrease in subsidies (-24.8%) due to the withdrawal of energy support measures. Revenue also increased y-o-y (+8.2%) due to increased economic activity, and the overhaul of the tax and social insurance contribution deferral schemes.

The **debt to GDP ratio** decreased to 154.2% in 2024, from 164.3% of GDP in 2023 (lowest since 2010), due to both the denominator effect (higher nominal GDP) and to a lower level of debt. It is worth noting that upward revisions in the debt ratios of 2022-2024 are due to GDP revisions.

Given that debt in nominal terms in 2024 came in broadly in line with the 2025 Budget Report, the recorded over-performance in the budget surplus is matched by a debt-increasing surprise in deficit-debt adjustments, in the form of **accumulated cash reserves** (increased to €36 bn from €33 bn).

Quarterly General Government figures – ESA 2010 (2025:Q1-Q2)

The general government primary balance improved as a % of GDP (by 0.8 pp) in the first two quarters of 2025 against the same period in 2024 primarily due to increased revenues.

- Revenues increased y-o-y (+7.9%) in the first semester of 2025 due to increased tax revenues and increased capital revenues, the latter reflecting an ESA adjustment in order to neutralize increased RRF expenditure. Primary expenditure increased (+3.9%) mainly due to an increase in intermediate consumption as a result of inflation, in capital expenditure due to the fine imposed by the EU (approximately €400 mn) to OPEKEPE (the Greek Payment Authority of Common Agricultural Policy Aid Schemes) and in social payments related to public pensions.
- Public debt in the first semester of 2025 decreased by 6.0 pp of GDP (to stand at 148.1% of GDP), compared to 2024:Q4, due to the rise in nominal GDP. It has increased by €3.6 bn in nominal terms since December 2024, reflecting frontloaded market issuance in 2025. Also cash reserves increased by €5.7 bn in 2025:Q1-Q2, to €42 bn from €36.3 bn in 2024:Q4.

According to PDMA estimates, in 2025:Q3, the debt to GDP ratio was 148.0% and general government cash reserves increased to €45.8 bn. At the same time, the weighted average maturity of public debt stood at 18.48 years, while the time to next refixing of the debt portfolio at 17.88 years. The cost of debt, as measured by the actual general government debt annual interest payments after swap (cash basis) as a proportion of public debt stood at 1.33%.

General Government cash fiscal data – In line with the revised annual target in ESA terms.

Central Government debt		
(% GDP)	2024	2025
	Jan-Oct	
General Government primary balance	6.1	5.0
Stock of arrears (€ bn)	3.5	3.8
Central Government debt	169.5	163.8
State budget primary balance	5.7	4.1
State budget primary balance period target	5.5	4.0

Source: Ministry of Finance

In the January-October 2025 period, **the primary general government cash outcome** recorded a lower surplus than the surplus achieved in the January-October 2024 period due to the base effect from privatization receipts last year (Attica Road).

In October 2025, **the stock of arrears** (excluding main pension claims) increased by €0.8 bn (mainly in hospitals) compared to December 2024. About 56% of total arrears (excluding tax refunds) originate in hospitals due to their reporting pre-clawback⁴. Post-clawback, hospital arrears are much lower.

The Central Government Debt at end-October 2025 was €407.4bn (163.8% of GDP) compared to €403.9 bn (170.6% of GDP) at end-December 2024.

The **State primary balance** in January-October 2025 recorded a surplus (4.1 % of GDP) compared to a higher surplus (5.7% of GDP) in the same period in 2024 due primarily to a base effect arising from the Attica Road concession agreement revenues of €3.2 bn in October 2024. Compared to the period target (according to the 2026 Budget), the primary balance over-performed by €0.4 bn mainly due to higher tax revenue and primary (non-investment) expenditure containment.

Financing

According to PDMA's funding strategy for 2025, the Hellenic Republic plans to issue €8 bn in GGBs in 2025. So far in 2025, it has borrowed €7.7 bn from the capital markets. More specifically, in January 2025, Greece attracted €4 bn from the issue of a 10-year bond with a yield of 3.64%. In February 2025, another €250 mn was attracted from the re-opening of the January 10-year bond with a yield of 3.24%. In March 2025, €3bn was attracted from the re-opening of the 15 and 30 -year bond issuance with yields of 4.06% and 4.41% respectively (of which €1.5 bn came from the exchange of two bonds maturing next year – switch and tender process – and the remaining €1.5 bn was fresh money). In April, Greece attracted €211 mn from the re-opening of a 5-year bond with a yield of 2.34%. In September, Greece attracted €250 mn from the re-opening of a 10-year bond with a yield of 3.26%.

Debt Sustainability Analysis - Risks to debt sustainability remain contained in the medium term

This mainly reflects (i) the highly concessional terms of official sector loans (involving grace periods, long maturities and interest deferrals) comprising the bulk of the accumulated debt stock, (ii) a 100% share of fixed-rate debt of the central government (at end-September 2025) and (iii) a very sizeable cash buffer in excess of 15% of GDP (at end-September 2025). In the longer term, however, sustainability risks remain elevated. As concessional loans get rolled over on market terms, exposure to adverse shocks will increase,

⁴The clawback mechanism, introduced by the Greek legislator in 2012 as part of the effort to reduce excessive health expenditure weighing on public debt, safeguards the level of public expenditure relating to hospitalization and pharmaceuticals up to a certain pecuniary limit. Essentially, when the respective public spending exceeds the thresholds of the relevant closed budgets, any surplus is 'repaid' by hospitals and pharmaceutical companies to the National Organisation for Healthcare (EOPYY), on the basis of a specific formula. When hospital arrears are reported pre-clawback, they are inflated as they do not take into account the surplus repayment to EOPYY.

demanding firm commitment to fiscal vigilance. Under the baseline assumptions of commitment to fiscal targets and effective utilization of NGEU funds, the debt to GDP ratio remains firmly on a downward trajectory and Gross Financing Needs over GDP stay safely below the 15% and 20% thresholds.

Pension Control and Payment System – ILIOS

In January-October 2025, total pension expenditure (including expenditure of pension funds classified as outside of general government) amounted to €27.4 bn (11.0% of GDP). This implies a 3.7% increase in pension expenditure vis-à-vis the same period in 2024 and this is the combined outcome of the increase in the number of pensioners, the clearance of pension arrear claims and the application of the main pension indexation rule. Indeed, the average main pension in October 2025 was €846 per month, compared to €824 a year earlier, representing a 2.6% increase, consistent with the annual pension uprating of 2.4% applied to 2025 main pensions. The average auxiliary pension was €196 per month, exhibiting a stable pattern since 2020. Old age pensions stand higher (at €1.115 per month on average), but new retirees receive much lower pensions (€566 per month on average) following recent pension reforms.

Bank deposits on a rising path

In January-October 2025, the annual growth rate of **private sector deposits** accelerated overall reflecting rising economic activity and strong corporate bank credit expansion (Charts 36 and 37).

In October 2025, **bank deposits** of non-financial corporations declined by €2.1 bn, while household deposits rose slightly by €0.2 bn.

The annual growth rate of corporate deposits continued to stand at a high level (12.2% in October, compared for example with an average growth rate of 5.5% in 2019), while the growth rate of household deposits accelerated somewhat but remained relatively low (3.4% in October, compared to 6.1% respectively). Indeed, during the last few years, the low level of deposit rates both in nominal and real terms encouraged a significant shift of funds from household deposits into other saving options, such as TBs and mutual funds, which are offering considerably higher returns.

*Data on the volume of bank loans do not include the amount of loans provided with public funds in the context of loan co-financing schemes ran by institutions such as Hellenic Development Bank, the EIB Group (e.g. TEPIX III loans or My Home loans) or the RRF. Volumes contain only the commercial bank participation in these loans towards NFCs or households.

Robust corporate loan growth – Contraction in housing loans reaching an end

Corporate bank credit expansion was robust during January-October 2025 under the favourable impact of solid economic growth, declining interest rates and supportive public programmes, underlain both by increased demand and by increased supply of loans (Chart 38). Nevertheless, in October 2025, **bank credit to NFCs** (based on net credit flows, i.e. new corporate credit minus repayments of outstanding credit) declined by €1.0 bn and the annual rate of growth fell considerably to 11.2% (from 16.1% in September), but still remained relatively high compared to all previous years since 2010.

The annual contraction rate of **housing loans to households** decelerated significantly in the course of 2025, as positive net flows have continued to be recorded for several months since Dec.2024, for the first time since mid-2010. **Consumer loans** have been recording continuously positive rates of growth already since mid-2022 (Chart 39). In October 2025, the contraction rate of **housing loans** decelerated further and reached 0% for the first time after almost fifteen years; the annual growth rate of consumer loans remained unchanged at 6.6%.

According to the **AnaCredit data**, in 2024, new corporate loans stood at €12.2 bn, well above the corresponding amount in 2023 (€9.9 bn) (Chart 40). By contrast, in the January-September 2025 period, new corporate loans amounted to €6.6 bn compared to €8.5 bn in the same period of 2024.

Bank lending rates declining mainly for loans to firms

In the January-October 2025 period, bank lending rates continued to decline in response to the ECB policy rate cuts. Interest rate reductions have been larger in the case of new corporate loans compared to new loans to households.

In October 2025, **bank lending rates** declined slightly for new corporate loans (to 3.87%) and for new housing loans (to 3.51%) (Chart 41).

Data on gross flows of bank loans show that in 2024 **new bank corporate term loan agreements** rose significantly to around €24 bn, compared to €17 bn in 2023 (Chart 42). By contrast, in the January-October 2025 period, these loan agreements amounted to €15.3 bn, compared to €19.7 bn in the respective period in 2024.

New bank housing loan agreements also rose to €1.4 bn in 2024 compared to €1.2 bn in 2023 (Chart 43). Moreover, in the January-October 2025 period, these loan agreements amounted to €1.6 bn compared to €1.1 bn in the respective period of 2024.

Continued support to bank lending from financial instruments and the RRF

During 2022-2026, credit provision to the economy is expected to be buoyed by the **resources provided through the Recovery and Resilience Facility (RRF) of the NGEU, and the implementation of the National Recovery and Resilience Plan (NRRP) “Greece 2.0”**. After the approval by the EC of the modified NRRP, total available investment resources reach up to €36 bn, comprising €18.3 bn in subsidies and €17.7 bn in loans (of which €11.2 bn will be channelled through commercial banks). After the disbursement of the 5th instalment of RRF funds toward Greece, the total inflow of RRF funds amounts to €11.4 bn.

As far as **RRF loans** through Greek commercial banks are concerned, up to November 2025, 547 loan agreements had been signed financing investments with a total budget of €17.8 bn (RRF loans: €7.8 bn, bank loans: €5.9 bn, investors’ own participation: €4.1 bn). Since the start of the implementation of the NRRP in July 2022, the amount of bank loan agreements co-financing RRF projects represents around 9% of total new bank term loan agreements over the same period.

In addition, **financial resources**, partly intermediated through local banks, continue being directed to the economy through financial instruments offered **in the context of various European and national initiatives**. Specifically, the Hellenic Development Bank (HDB), the EIB and the EIF co-finance or guarantee loans extended by commercial banks, mostly to non-financial corporations and secondarily to households.

In 2024, **bank loan disbursements to NFCs** supported by these financial instruments amounted to almost €3.7 bn (2023: €2.0 bn) thus representing 14% of total new bank business loans (40% of new bank loans to SMEs respectively). In January-October 2025, loan disbursements to firms related to these instruments amounted to €3.2 bn representing 20% of total new bank business loans (€2.4 bn representing 45% for SMEs respectively).

I. Bank Lending Survey results for Greece (2025:Q3 compared to 2025:Q2):

Slight easing in credit standards and terms and conditions of loans to enterprises and a rise in the demand for corporate and consumer loans

In 2025Q3, Greek banks kept loan **credit standards** unchanged for loans to households, and they slightly eased them for loans to NFCs, compared to 2025Q2. Lending **terms and conditions** too were loosened for loans to NFCs. In particular, further narrowing of the lending margins was reported mainly for average-risk loans, and to some extent for higher-risk loans. A slight easing was mentioned for some of the remaining loan conditions, namely collateral requirements, covenants and maturity. Regarding loans to households, overall terms and conditions were tightened somewhat for house purchase loans --due to the rise of non-interest rate charges-- and they were left unchanged for consumer loans.

Greek credit institutions assessed that there was an increase in the **demand** for bank credit by NFCs during 2025Q3 comparing with 2025Q2. During the last three quarters, the reported rises in demand became progressively higher. The expansion in demand was equally significant for large firms and SMEs while mostly related to long-term loans. According to survey responses, the main factors that contributed positively to loan demand included i) higher needs for NFCs to finance fixed investments as well as inventories and working capital and ii) the competition, amongst the banks, for NFC loans. Lower interest rates additionally carried a small positive contribution to demand, among other factors (e.g., relatively lower company issuance of debt securities and equity).

The banks participating in the Survey report that there was a rise in the demand for consumer credit and a decline in the demand for housing loans during 2025Q3. Consumer confidence and spending on durable consumer goods exerted a positive stimulus on the demand for consumer credit (remaining factors were unchanged). In the case of housing loans, house market prospects were the only factor that was reported to have a somewhat negative impact on demand, and all other factors were recorded unchanged.

In response to one of the ad hoc questions regarding the impact of changes in the key policy rate on their profitability over 2025Q2-2025Q3, banks estimated that overall profitability decreased, as they witnessed a decrease in their net interest expenses, because of the decline in interest rates, while there was a slightly positive loan volume-effect.

II. Survey on the access to finance of enterprises in the euro area (SAFE results for Greece): July-September 2025 compared to April-June 2025 (and April-September 2025 compared to October 2024-March 2025)

Greek SMEs report declines in lending rates, high levels of internal funds but a higher loan rejection rate

The bank loans financing gap – i.e., the difference between the change in financing needs of firms and the change in the availability of bank loans – was perceived to have turned marginally negative in 2025:Q3, indicating a net narrowing of the bank loan financing gap faced by the sample of respondent firms in all sizes (Chart 46).

Greek SMEs reported that during April to September 2025, the lack of skilled labour continued to be their main concern. In this round, the rise in costs of production is ranked as their second most important problem followed by competition, access to finance, regulation, and finding customers.

The **availability (supply)** of bank loans and credit lines was seen to continue rising on semi-annual basis, while q-o-q SMEs reported only a marginal increase for bank loan availability along with a small drop in the availability of credit lines. At the same time, **SMEs' needs (demand)** for bank credit continued to

increase considerably both compared to the previous semester, as well as on quarterly basis esp. in the case of credit lines (Chart 47).

Among the **factors affecting the supply of external financing**, the influence of the general economic outlook has remained negative both on semi-annual basis as well as compared to the previous quarter. On the other hand, both on quarterly and on semi-annual basis, SMEs continued to report a strong positive impact of the factors related to their own creditworthiness (namely firms' specific outlook, capital, and credit history). The willingness of banks to provide credit was perceived to have continued being supportive. SMEs continued reporting that their access to public financial support programmes deteriorated.

The percentage of firms which applied for a bank loan remained high in this survey round on semi-annual basis (25% up from 24%), while q-o-q was somewhat lower (16% down from 20%). On quarterly basis SMEs continued to report sufficiency of internal funds as the main reason for not applying for a bank loan, while on semi-annual basis self-funding was ranked second following other reasons in the first place. Firms' discouragement for fear of rejection by the bank remained low both q-o-q as well as compared to the previous semester. In another related question concerning the reasons for which bank loans are not relevant for the firm in the previous semester, fewer respondents claimed that there was no need for this type of financing, while unchanged was the percentage of those mentioning the high-interest rate cost of bank loans.

As far as the **outcome of bank term loan applications** is concerned, the rejection rate increased both on semi-annual basis and to a markedly greater extent on quarterly basis, while the approval rate (percentage of applications satisfied mostly or in full) was perceived lower both q-o-q as well as compared to the previous semester.

Terms and conditions of bank financing were reported to be more favourable regarding the cost of financing, as SMEs continued to report a net decrease in bank loan interest rates both for the past six months (-10%) and on a quarterly basis (-24%). At the same time firms reported a lower net increase in charges, fees and commissions both on semi-annual basis as well as compared to the previous quarter. During the past six-month period, SMEs reported a lower net increase in collateral requirements along with higher net increases in the available size and maturity of loans, while q-o-q they recorded a somewhat higher net increase in collateral requirements along with lower net increases in the available size and maturity of loans.

Chart 46: External financing gap faced by firms in Greece and the euro area (weighted net balances)

* The bank loan financing gap indicator of the SAFE shows the difference between the change in needs and the change in availability for bank loans as reported by respondent firms. A positive value of the indicator points to an increase in the financing gap.

Note: EABER is the euro area benchmark breakeven inflation rate and EAFLS is the Euro 5 Year - 5 Year forward inflation linked swap.

Market pricing of Greek government bonds follows euro-area developments closely.

Year-to-date, Greek government bond (GGB) yields have risen, more so in the long-term segments of the curve, in tandem with the rise in other EA sovereign bond yields; however, GGBs have fared better than EA benchmark bonds, benefitting relatively more from the portfolio repositioning into EA assets.

Sovereign bond yields in the euro area rose somewhat vis-à-vis their levels one month ago (Table 7.1 and Chart 48). The upward move in EA sovereign bond yields has come both on the back of investor concerns about persistent fiscal deficits in EA large economies and the lowering of expectations for rate cuts by the ECB in 2026; at the same time the spread of GGB yields to German counterparts stood at pre-crisis levels.

The GGB yield curve moved higher compared to one month ago, broadly in line with developments in other euro area sovereign bond markets (Chart 49).

Notes: The table reports long-term issuer ratings. The spread of Greece corresponds to the Greek-10y vs German-10y spread; the average spread across BBB-rated sovereigns is calculated vs. the UST-10y, after adjusting for exchange rate risk.

All rating agencies now assign Greece a rating in investment grade...

The **sovereign credit ratings assigned to Greece** have followed an upward trend for a long period of time, almost uninterruptedly since 2015, resulting in regaining the Investment Grade (IG) in 2023 (see Chart 50). Prudent fiscal policies and robust growth rates, which feed into a declining public debt trajectory culminated in the rating upgrades.

Greece is presently rated at BBB by S&P, Fitch, DBRS (all with a stable outlook) and Scope Ratings (positive outlook), and at BBB-/Baa3 by Moody's.

According to the rating agencies, **further upgrades of the sovereign may result** from sustained economic performance, prudent fiscal policies, a continuation of structural reforms fostering the competitiveness of the Greek economy and a further reduction of banks' stock of NPLs, with the latter thus moving closer to the EU average.

...while GGBs' pricing is favourable compared to other BBB rated sovereign bonds.

Markets price Greek sovereign bonds more favourably than the median of BBB rated sovereign bonds, with the GGB 10-year yield standing firmly in the yield range of single-A rated sovereigns (see Chart 51).

a) Volatility measures are standard deviations of daily returns with a fixed monthly rolling window.

b) Intraday volatility is the range of intraday prices, relative to the closing price.

Share prices of listed Greek companies have posted strong positive returns in 2024 as well as in 2025-to-date, in line with the good performance of the economy.

Share prices in the Athens Stock Exchange (ASE) recorded strong positive returns in 2024 and 2025 to date, outperforming euro area counterparts (Chart 53).

Share prices of Greek listed companies rose vis-à-vis one month ago, with sectors posting a strong rise being those of basic materials, industrials, energy and essential consumer goods ('consumer staples'); see Table 7.4. At the same time, euro area share prices fell somewhat, vis-à-vis one month ago.

Sources: 1) income statement items, NPE ratio, and CET1 ratio (consolidated data; solo data for NPE ratio of SIs and LSIs); banks' financial statements, ECB, and Bank of Greece, 2) MREL ratio: SRB and banks' financial statements.

Notes: CET1 ratio: fully loaded CET1 regulatory capital divided by total risk weighted assets. 

Greek banks reported resilient results for the nine-month period of this year, despite challenges in the external environment and ECB rate cuts.

According to the January-September 2025 period financial results, the aggregate net income of the four Greek significant banks totaled €3.4bn (Chart 54), slightly down on a yearly basis, mainly due to a lower net interest income, amid falling interest rates, and higher operating expenditure. On the other hand, higher net fees & commissions and other income, as well as a decline in impairment losses on loans and a one-off tax gain from the reverse hive-down of Alpha Bank, completed in June 2025, partly offset the fall of net interest income.

The capital buffers of significant banks rose in September compared to a year earlier, but the overall CET1 ratio declined modestly due to a relatively larger increase in risk weighted assets, reflecting loan book growth. Banks' capital quality is also expected to benefit from sustained profitability, as banks' plans for an acceleration in deferred tax credit (DTC) amortization materialize. Greek banks' funding & liquidity positions remain solid, and MREL ratios exceeded the (final) targets, applicable from June. The aggregate NPE ratio of significant banks dropped further, converging further to the EA average (Chart 55).

The 2025 EU-wide stress test results reconfirmed the resilience of Greek banks and their ability to withstand negative shocks in the medium-term horizon. The results reveal that Greek banks would maintain capital ratios well above regulatory requirements and perform better than the European average even under a severe hypothetical economic downturn.

EA BBB senior bank bonds		3.19	3.01	18	-61	-43	-166	--	--

Sources: Rating agencies and LSEG. Range of ratings: range of SI's highest long-term rating across rating agencies. For Fitch, S&P, and M.DBRs, the benchmark rating refers to the long-term issuer rating, and for Moody's it refers to the deposit rating.

...and these developments are reflected in improving bank ratings...

Credit ratings of Greek banks continue to benefit from the sovereign's upgrades (see Chart 57). Since the beginning of the year, there has been a series of upgrades in the ratings of Greek systemically important banks (S&P in January, Moody's in March & October, Fitch in April & October and Morningstar DBRS in March & April), reflecting the improved operating environment and better bank fundamentals.

...and favourable market-based cost of funding.

Yields on senior bonds issued by Greek banks increased in the period under review, in line with those of euro area peers (Chart 56).

Overall, Greek banks' funding costs continue to decline (see Charts 55 & 56), reflecting the gradual pass-through of lower policy rates to the cost incurred from deposits, lower cost of interbank borrowing and the effect from credit rating upgrades that lower the cost of new bond issuance. In total, Greek banks' weighted average funding rate stood at around 1% in September 2025.

Chart 56: GR and EA bank bond yields
(percentage points; daily data)

Sources: Bank of Greece & LSEG.

Note: Blue lines: the weighted average yield of senior bonds issued by Greek systemic banks. Orange (purple) lines: the yields of iBoxx EUR indices of non-IG (BBB) bank bonds issued in the euro area. Latest obs. 11/12/2025.

Chart 58: GR banks' funding costs
(percentage points; quarterly data)

Source: Bank of Greece.

Note: The composite funding cost is the w.a. cost of individual cost components, with the weights capturing their importance in the total funding mix.

Chart 57: GR banks' issuer ratings
(quarterly data)

Note: The chart shows the average long-term rating of systemic banks in Greece and the Greek sovereign credit rating. Issuer, senior debt, and deposit ratings of the four major credit rating agencies (Moody's, Standard and Poor's, Fitch, and DBRS) have been collected for banks. Ratings have been transformed from the alphanumeric scale (i.e. AAA, AA+/Aa1, AA/Aa, ...) to a numeric scale (i.e. AAA=24, AA+/Aa1=23, ...) in order for the average rating to be calculated. Entities are assigned the highest rating among the four rating agencies at the end of each quarter.

Sources: LSEG, credit rating agencies.

Note: The chart shows the highest end-of-quarter rating of systemic banks by Moody's, S&P, Fitch, M. DBRS and Scope, as well as the Greek sovereign credit rating. For Moody's it refers to the deposit rating, while for the rest to the long-term issuer rating.

Chart 59: GR banks' funding composition
(percentage points; quarterly data)

Source: Bank of Greece.

Note: Banks' liability structure is built out of banks' funding components.

9. PRIVATISATIONS AND STRUCTURAL REFORMS

Privatisations

According to the 2026 State Budget, public revenues from privatisations amounted to €497.3 mn in 2023 and €4.180,0 mn in 2024, mainly due to revenues from Attiki Odos motorway, Athens International Airport and Hellinikon. For 2025, public revenues from privatizations are estimated at €1,561.4 mn, mainly from the concession contract for the operation and exploitation of Egnatia Odos motorway (€1,350.0 mn). The forecast for 2026, according to the 2026 State Budget, is €322.1 mn mainly attributed to projects at preparation stage. The forecast for 2027 and 2028 is €212.4 mn and €2.663.1 mn, respectively.

Growthfund announced the launch of an international tender process for the establishment and transfer of the surface right on the property “Markopoulo Olympic Equestrian Centre”.

Growthfund announced an accelerated bookbuild offering up to 1,815,000 ordinary shares of EYATH S.A. (Thessaloniki Water Supply and Sewerage), representing approximately 5.0% of the company’s existing share capital.

Structural reforms

The European Commission in the last In-Depth review (May 2025) acknowledges that the Greek authorities continued implementing measures. First, to fight tax evasion and the informal economy, the authorities pursued the interconnection of cash registers and points of sale (POS) terminals with the tax authorities, a 30% reduction of the pensions of employed pensioners, reduction of the social contribution rate by 1 pp. and the introduction of a temporary system that provides for an indirect calculation of an imputed minimum tax base for the self-employed. Moreover, digitalisation of the tax and customs administration and simplification of tax legislation are ongoing. In the judicial sector, progress was achieved through a revision of the judicial map, which can help shorten legal procedures while additional steps have been taken to support the enforcement of legacy NPLs. Moreover, reform of the Hellenic Cadastre (mapping) is also ongoing.

However, the report flags several structural challenges. Skills gaps and mismatches, the relatively tight regulations for part-time employment, insufficient supply of child- and elderly care, low labour mobility, and disincentives inherent in the tax and benefit system continue to hamper labour supply. No progress has been achieved with regards to barriers to entry to professional services, and the regulatory framework of retail sector has a margin for improvement.

The new labour law (L.5053/2023) establishes rules to simplify administrative procedures and protect the employees. In particular, it provides, inter alia: the possibility to work for more than one employer, new flexible employment contracts, six-day work with an increased daily wage, increased fines for violations of undeclared work, a probationary period of six months instead of one year for a hired employee, counting in-house training as paid work time, simplification of bureaucratic procedures for businesses that choose to implement the digital work card, criminalization of labour obstruction, creation of a digital job-finding platform. Also, the suspension of the seniority allowance is lifted from 1/1/2024 for employees in the private sector, without retroactivity (restoration of the three-year allowances, which have been suspended since 2012).

Reform and Investment projects relating to all four pillars of the **National Recovery and Resilience Plan** are in progress. Most notably major projects that have been funded so far concern: household energy upgrades, electrical interconnection of islands, electric energy storage facilities, telecommunications (microsatellites network), upskilling and reskilling of unemployed, digitalization of education and construction of central Greece highway.

According to the **2024 Ageing Report** (2024 AR), public pension expenditure as % of GDP in Greece is expected to decline by 2.5p.p. over the projection horizon (from 14.5% of GDP in 2022 to 12.0% of GDP in 2070). This represents the largest fall amongst EU member states, for whom public pension expenditure as % of GDP is on average projected to marginally increase by 0.4 p.p. by 2070. The projections are in line with the pension system sustainability clause, which requires that 2060 public pension expenditure may rise by up to 2.5 percentage points of GDP when compared to 2009 expenditure (according to the 2024 AR, in 2060 pension expenditure in Greece will be lower by 1.6 p.p. when compared to 2009). Age

retirement thresholds have been revised upwards (from 67) to reflect the increases marked in the life expectancy at 65 years of age (by one year in 2027, 2036, 2045, 2054 and 2066).

The latest release of **OECD's Product Market Regulation indicator** (July 2024), which measures the distortions to competition, suggests that Greece noted the greatest improvement among the OECD members during the period 2018-2023 (see Chart App 16). The regulatory framework of Greece is now close to the OECD average, as a result of significant reforms. However, there is considerable room to make the regulatory framework of the professional services (especially for lawyers) and retail sector more competition-friendly (see Chart App 17). In addition, the country should consider improving its mechanisms for assessing the impact of new and existing laws and regulations on competition, address its high non-tariff trade barriers and further align the governance of state-owned enterprises with key OECD best practices aimed at ensuring a level playing field with private firms.

Chart 14: Bank credit to non-financial corporations and households (annual percentage change %)

Source: Bank of Greece.

Chart 15: Bank interest rates of new loans and deposits to euro area residents (annual percentages, weighted averages of interest rates on the various loan and deposit categories)

* Before June 2014 interest rates agreed in the context of most loan modifications were recorded as interest rates on new lending. As of June 2014, interest rates, if set below market conditions, in the context of loan modifications in response to financial distress of the borrower, are no longer reflected in the series for the bank lending rate.

Source: Bank of Greece.

STRUCTURAL REFORM INDICATORS

Chart 16: OECD Product Market Regulation Indicator

Source: OECD, 2024 Product Market Regulation.

Notes: The PMR economy-wide indicator measures the regulatory barriers to firm entry and competition in a broad range of key policy areas, ranging from licensing and public procurement, to governance of SOEs, price controls, evaluation of new and existing regulations, and foreign trade. The information used to construct the indicator is collected through a questionnaire. Low (high) values suggest few (many) regulatory barriers.

Chart 17: Regulation in services

Source: OECD, 2024 Product Market Regulation.

Note: The professional services indicators cover information on entry requirements and conduct constraints whereas the retail trade indicators cover a broad set of regulatory issues, ranging from shop opening hours to retail price regulation, and licensing. Low (high) values suggest few (many) regulatory barriers.

The Minister states that the government will issue the related roadmap/ action plan by the end of December 2025; the Social Accord will be adopted by law in January 2026.
- 27/11/2025: ELSTAT released Building Activity Survey for August 2025.
- 27/11/2025: ELSTAT released Quarterly Business Demography for 2025:Q3.
- 27/11/2025: European Commission released ESI for November 2025.
- 28/11/2025: ELSTAT released Turnover Index in Retail Trade for September 2025.
- 28/11/2025: ELSTAT released Producer Price Index in Industry for October 2025.
- 28/11/2025: A draft bill was submitted to Parliament on the transposition of directive 2009/31/EC concerning the geological storage of carbon dioxide and on the organisation of the hydrogen market.
- 01/12/2025: S&P Global released PMI for November 2025.
- 02/12/2025: ELSTAT released Labour Force Survey (monthly estimates) for October 2025.
- 02/12/2025: ELSTAT released Monthly Turnover Indices for Motor Trade (of the quarterly period) for 2025:Q3.
- 02/12/2025: ELSTAT released Monthly Turnover Indices in Wholesale Trade (of the quarterly period) for 2025:Q3.
- 04/12/2025: ELSTAT released Labour Force Survey for 2025:Q3.
- 05/12/2025: ELSTAT released Quarterly National Accounts (provisional data) for 2025:Q3.
- 07/12/2025: The 5th event of the Ministry of Labor's Rebrain Greece action, meant to encourage the return of highly-skilled Greeks working abroad, takes place in New York City. Representatives of 35 top business groups operating in Greece meet with 1,500 Greek scientists and professionals from various cities in the US and Canada.
- 08/12/2025: A draft bill was submitted to Parliament on setting up a company called "Greek Factory of AI", meant to promote a Greek AI ecosystem. The bill changes HDIKA (Digital Governance of Social Security) to HDYKA (Digital Governance of Health and Social Security).
- 09/12/2025: A draft bill was submitted to Parliament on the framework for the National Development Program and for the transfer of OPEKEPE under AADE (the Independent Authority of Public Revenues).
- 09/12/2025: ELSTAT released Harmonised Index of Consumer Prices for November 2025.
- 10/12/2025: ELSTAT released Industrial Production Index for November 2025.
- 11/12/2025: BoG released Commercial Property Indices for 2025:H1.
- 11/12/2025: ELSTAT released the Evolution of Turnover of Enterprises for October 2025.
- 11/12/2025: ELSTAT released the Issuing of Motor Vehicle Licences for November 2025.
- 11/12/2025: ELSTAT released Import Price Index in Industry for October 2025.

External Sector

- 20/11/2025: BoG released BoP data for September 2025.

- 21/11/2025: BoG released travel services data for September 2025.
- 08/12/2025: ELSTAT released merchandise trade data for October 2025.

Fiscal

- 17/11/2025: MoF, state budget execution for Jan-October 2025 (preliminary data).
- 18/11/2025: BoG, central government net borrowing requirements on a cash basis for January – October 2025.
- 19/11/2025: MoF, Quarterly Public Debt Bulletin, September 2025.
- 20/11/2025: MoF, 2026 Budget Report.
- 25/11/2025: MoF, state budget execution for Jan-October 2025 (final data).
- 08/12/2025: MoF, general government cash balance for Jan-October 2025.

Monetary & Financial

- 14/11/2025: Fitch Ratings upgraded the Greek sovereign by one notch to BBB (outlook stable). According to the agency, the rating decision mainly reflects the country's progress on the fiscal front and its improved credit profile, and to a lesser extent, its resilient economic growth and strengthened banking sector. Specifically, the agency assesses that the country will continue to benefit from: i) a firmly declining public debt-to-GDP ratio, ii) a strong budget performance, iii) modest and growth-enhancing fiscal easing, iv) fiscal prudence, and v) low financing risks.
- 20/11/2025: NBG announced the pricing of a new €500mn senior preferred bond with a coupon rate of 3.375% and a yield at issuance of 3.422% (issue price: 99.749%). The new bond matures in seven years (callable at six years) and contributes to bank's MREL position. Investor demand was strong with oversubscription exceeding 3.5 times.
- 26/11/2025: Piraeus Bank announced the pricing of a new €500mn senior preferred bond with a coupon rate of 3.375% maturing in six years, callable at five years (issue price: 99.995%). According to the bank, the issue proceeds which contribute to bank's MREL position will be used for financing green projects. Investor demand was strong with oversubscription exceeding 4 times.
- 27/11/2025: ECB released data on monetary developments in the euro area for October 2025.
- 03/12/2025: ECB released data on MFI interest rate statistics in the euro area for October 2025.

NEXT FIVE WEEKS' NEWS AND DATA RELEASES (15 December 2025 – 16 January 2026)

Real Economy

- 15/12/2025: ELSTAT releases Quarterly Non-Financial Accounts of Institutional Sectors for 2025:Q2.
- 15/12/2025: ELSTAT releases Index of Wages Cost for 2025:Q3.
- 15/12/2025: ELSTAT releases Production Index in Construction for 2025:Q3.
- 19/12/2025: ELSTAT releases Turnover Index in Industry for October 2025.
- 29/12/2025: ELSTAT releases Building Activity Survey for September 2025.
- 30/12/2025: ELSTAT releases Producer Price Index in Industry for November 2025.
- 31/12/2025: ELSTAT releases Services Producer Price Indices for 2025:Q3.
- 31/12/2025: ELSTAT releases Turnover Index in Retail Trade for October 2025.
- 02/01/2026: S&P Global releases PMI for December 2025.
- 02/01/2026: ELSTAT releases Labour force survey (monthly estimates) for November 2025.
- 08/01/2026: European Commission releases Economic Sentiment Indicator for December 2025.
- 09/01/2026: ELSTAT releases Industrial production index for November 2025.
- 13/01/2026: ELSTAT releases Harmonised index of consumer prices for December 2025.
- 14/01/2026: ELSTAT releases Import price index in industry for November 2025.
- 15/01/2026: ELSTAT releases Evolution of turnover of enterprises for November 2025.
- 15/01/2026: ELSTAT releases Issuing of motor vehicle licences for December 2025.

External Sector

- 22/12/2025: BoG releases BoP data for October 2025.
- 23/12/2025: BoG releases travel services data for October 2025.
- 09/01/2026: ELSTAT releases merchandise trade data for November 2025.

Fiscal

- 15/12/2025: MoF, state budget execution for Jan-November 2025 (preliminary data).
- 16/12/2025: BoG, central government net borrowing requirements on a cash basis for January – November 2025.
- 20/12/2025: MoF, state budget execution for Jan-November 2025 (final data).
- 08/01/2025: MoF, general government cash balance for Jan-November 2025.

Monetary & Financial

- 02/12/2025: ECB releases data on monetary developments in the euro area for November 2025.
- 07/01/2025: ECB releases data on MFI interest rate statistics in the euro area for November 2025.
