

NOTE ON THE GREEK ECONOMY

July 17, 2026

Economic Analysis and Research Department

Recent Economic Developments: an overview

Economic activity continued to expand in 2026:Q1 (2.0% y-o-y; +0.2% q-o-q), outperforming the euro area (0.5% y-o-y; 0.0% q-o-q), despite elevated uncertainty in the international economic environment. Growth in 2026:Q1 in year on year terms was mainly driven by the positive contributions of investment (2.0 pp), net exports (0.6 pp) and private consumption (0.5 pp), while stocks made a negative contribution. **HICP inflation** stood at 2.9% in 2025, mainly attributed to services inflation. In the first six months of 2026, headline inflation reversed course increasing on average to 3.8% mainly because of huge increases in energy prices; in June 2026, headline inflation declined to 3.9% from 4.9% in May, due to declines in services, energy and unprocessed food inflation. In the **housing market**, apartment prices increased further, though at a decelerating pace, in the course of 2025 and in 2026:Q1. **Labour market developments** remained positive in 2026:Q2, with employment rising. The **current account deficit** recorded a notable improvement in 2025, after the widening in 2024; however, in the first four months of 2026 the current account deficit widened compared with the respective period of 2025. On the fiscal front, the 2025 **primary fiscal outcome** settled at a high surplus of 4.9% of GDP, significantly larger than the 2026 Budget target (3.7%) approximately equally due to expenditure containment and higher revenue. The **debt to GDP ratio** decreased by 8.0 pps in 2025, compared to 2024, down to 146.1% on account of the high primary surplus, early debt repayment and notable interest-growth rate differential. **Corporate bank credit expansion** has been robust in 2025 and the first months of 2026 in line with sustained economic growth and lower lending rates, while the growth rate of **private sector deposits** accelerated. After declining due to past ECB policy rate cuts, **bank lending rates to firms** rose slightly during 2026. **Government bond yields and spreads**, during 2025 and 2026-to-date, exhibited resilience amid a volatile global environment, as the impact of Greece's sovereign credit rating upgrades helped moderate the effect of rising global financial markets volatility. **Greek corporate bonds and equities** outperformed their euro-area peers in 2025, while in 2026-to-date they have remained resilient, despite the volatile global financial landscape.

Looking ahead, according to the latest BoG projections (baseline), **the growth rate of the Greek economy** is expected to moderate to 1.9% in 2026, reflecting the uncertainty in the global economy, and to remain at 1.9% in 2027 and reach 2.0% in 2028, outperforming euro area growth. Growth will be mainly driven by private consumption and investment, while the contribution of net exports is expected to be negative. **Inflation** is projected to reach 3.8% in 2026, and to gradually moderate thereafter assuming that the war in the Middle East is over and energy and food prices subside. The **fiscal stance** is expected to be expansionary in 2026 due to the adopted fiscal policy measures to boost disposable income with an emphasis on reducing the tax burden.

Despite a recent rise in oil prices due to renewed tensions in the Middle East, the energy prices are currently still notably lower vs those included in the latest projections (cut off date 21 May). This points to a more favourable outlook for the Greek economy. According to this scenario, it is projected that the GDP growth rate will be slightly higher than the baseline (2.0% in 2026 and 2.1% in 2027 and 2028), while HICP inflation will be slightly lower than the baseline (3.7% in 2026, 2.5% in 2027, and 2.2% in 2028).

Latest economic information - available in the last four weeks

Economic Activity

The **ESI** increased to 108.3 in June (from 107.7 in May) due to an improvement in business expectations in the services sector; by contrast, business expectations receded in the manufacturing, retail trade and construction sectors, while consumer confidence also declined.

The June **PMI** stood at 53.8, up from 53.3 in May, signalling the fastest improvement in the Greek manufacturing sector in 3 months amid steeper increases in production levels and stronger domestic demand.

The **turnover of enterprises** obliged to double-entry accounting book keeping, increased by 6.9% y-o-y in May 2026 and by 5.4% y-o-y in the January-May 2026 period.

Industrial production increased by 3.9% y-o-y in May 2026 due to a rise in manufacturing production (3.7% y-o-y) and electricity supply (7.1% y-o-y). In the January-May 2026 period, industrial production increased by 3.9% y-o-y.

VAT revenues at constant prices increased by 5.1% y-o-y in May 2026 and by 5.3% y-o-y in the January-May 2026 period pointing to ongoing consumption growth.

The **retail sales volume index** marginally declined by 0.1% y-o-y in April 2026, but increased by 2.8% y-o-y in the January-April 2026 period suggesting rising consumption growth.

New private passenger car registrations strongly increased by 20.8% y-o-y in June 2026 and by 6.4% y-o-y in 2026:H1.

Prices

HICP headline inflation declined to 3.9% in June 2026 from 4.9% in May. This development is attributed to the declines in services inflation (4.5% in June, from 5.7% in May), energy inflation (14.7%, from 20.0%) and unprocessed food inflation (5.1%, from 6.5%).

Labour market

Employment (sa) increased by 0.5% y-o-y in May 2026, while the unemployment rate (sa) declined to 8.1%.

Net flows of dependent employment in the private sector were positive in May 2026 (132,730 jobs) mainly due to hiring in hotels and restaurants.

External Balances, Competitiveness

The appreciation of the **nominal effective exchange rate** continued in 2026:Q2, however at a slower pace. The **price competitiveness index** posted a lower deterioration in 2026:Q2 also associated with a smaller euro appreciation. The **unit labour cost competitiveness index** posted a small deterioration in 2026:Q2.

Fiscal developments

In January-June 2026, the **state budget primary outcome** (preliminary data) came in at a surplus of 1.7% of GDP, compared to a surplus of 1.8% of GDP in January-June 2025. Compared to the period target (according to the 2026 Budget), the primary balance over-performed by €2.5 bn due to both revenue over-performance and primary expenditure containment.

In the January-May 2026 period, the **primary general government cash outcome** recorded a surplus of 1.9% of GDP, compared to 2.0% of GDP in January-May 2025.

Money and Credit

In May 2026, **private sector deposits** increased by €5.3 bn in total, to stand at €215 bn, mostly due to a rise in corporate deposits. The growth rate of **bank credit to non-financial corporations** accelerated to 9.8% y-o-y, and the respective rate of housing loans stood at 1.2%.

In May 2026, **bank lending rates** decreased both for new corporate loans (to 4.29%, from 4.46% in April) and for new housing loans (to 3.28%, from 3.32% in April).

Financial market developments

Greek government bonds moved in line with EA sovereign bonds, with yields rising across the curve as renewed geopolitical tensions in the Middle East pushed up oil prices, market-based EA inflation expectations and market-implied EA policy rates. GGB yield differentials over German benchmark bonds remained at the low quartile (25%) of the historical distribution.

Greek corporate bond yields rose somewhat over the past month, broadly in line with other EA corporate bond yields. **Greek bank senior bond yields** rose somewhat in tandem with euro area peers.

Greek equity prices rose slightly over the past month, while euro area peer markets retreated, with energy & utilities companies outperforming the general index.

Fitch upgraded the ratings of NBG and Eurobank by one notch to 'BBB' (outlook stable) **and changed the outlook for Piraeus Bank** to positive from stable (maintaining a rating of 'BBB-'). These developments reflect the agency's view that Greek banks face an improved operating environment with positive implications for their credit profiles, capitalisation and funding.

*PDMA estimate

Economic Activity

Real GDP increased by 2.0% y-o-y in 2026:Q1 mainly driven by the acceleration in investment growth (12.1% y-o-y; a contribution 2.0 pp), a rise in private consumption (0.7% y-o-y; a contribution 0.5 pp) and a positive net exports' contribution (0.6 pp). Stocks made a negative contribution to growth.

Gross fixed capital formation accelerated to 12.1% y-o-y in 2026:Q1 due to a rise across most investment products, i.e. machinery equipment (16.2% y-o-y), transport equipment (15.3%), as well as housing (15.0% y-o-y) and other constructions investment (18.1% y-o-y).

The net exports contribution to growth was positive (0.6 pp) as exports of goods and services increased (2.4% y-o-y), while imports of goods and services marginally rose (+0.2% y-o-y).

Soft data (PMI, ESI) point to a continuation of growth standing at high levels and remaining above euro area average.

Hard data are overall positive. Most indicators continue to move in positive territory (VAT revenues, retail sales, industrial production, tourism, employment).

Prices and real estate market

HICP inflation remained elevated at 2.9% on average in 2025, having been shaped mainly by elevated services inflation. In the first six months of 2026, headline inflation reversed course increasing on average to 3.8%, mainly attributed to huge increases in energy prices. HICP inflation declined to 3.9% in June 2026 from 4.9% in May, attributed to declines in services inflation (4.5% from 5.7%), energy inflation (14.7% from 20.0%) and unprocessed food inflation (5.1% from 6.5%).

Both residential and commercial property prices (prime office and retail) increased during 2025. In the **housing market**, in 2025, **apartment prices** continued to increase at a strong, though decelerating, rate (8.1% compared to 9.1% in 2024). In the **commercial real estate sector**, prime office prices increased by 5.1% in 2025, while prime retail prices increased by 4.8% over the same period.

Labour market and costs

Total employment growth remained positive in 2026:Q1 largely due to higher demand for labour in the manufacturing, tourism, and administrative, support and professional services sectors. **The unemployment rate** in 2026:Q1 increased by 0.2 pp compared to 2025:Q1. LFS monthly data for May 2026 show an increase in employment growth (sa), while the unemployment rate (sa) decreased significantly compared to both the previous month and May 2025.

Net flows of dependent employment in the private sector were positive in 2025 and higher compared to

2024. In May 2026, net flows were positive (132,730 jobs) due to hiring in hotels and restaurants.

Compensation of employees (sa) increased by 4.5% y-o-y in 2026:Q1 (compared to 7.0% y-o-y in 2025:Q1) due to a rise in both compensation per employee (3.3% y-o-y) and the number of employees (1.2% y-o-y).

On April 1st 2026, the **minimum wage** increased from €880 to €920 per month—an approximate 4.5% rise (4.9% y-o-y on average in 2026).

External Balances, Competitiveness

In **2025**, the **current account deficit** posted a **notable improvement** y-o-y, reflecting improvements in all sub-accounts, and mainly in the balance of goods.

In **January-April 2026**, the **current account** deficit widened y-o-y, owing to a deterioration mostly in the **secondary and primary income** accounts, which was partially offset by an improvement in the **goods and services** balances.

In **April 2026**, the **current account** deficit decreased y-o-y, due to improvements mostly in the **goods and secondary** income balances and, to a lesser extent, in the **primary income** account, while the **services** balance recorded a slight deterioration.

The appreciation of the **nominal effective exchange rate** continued in 2026:Q2, though at a slower pace. The **price competitiveness index** posted a lower deterioration in 2026:Q2 also associated with a smaller euro appreciation. The **unit labour cost competitiveness index** posted a small deterioration in 2026:Q2.

Fiscal developments

The **general government primary outcome** in 2025 (4.9% of GDP) **was confirmed among the highest in the EU and the debt ratio decreased significantly** (by 8.0 pps to 146.1% of GDP). Revenue overperformance in recent years has created fiscal space allowing for permanent expansionary measures. The debt to GDP ratio decreased by 8.0 pps in 2025 compared to 2024, to 146.1%, on account of the high primary surplus, early debt repayment and notable interest-growth rate differential.

Money and Credit

The growth rate of **private sector deposits** accelerated during 2025 and the first months of 2026 under the positive impact of robust economic growth and strong corporate bank credit expansion. During the last few years, the recorded shift of household funds into alternative financial assets than bank deposits due to the low level of deposit rates attenuated the growth rate of household deposits.

Despite a mild deceleration during 2026, **corporate bank credit growth** remains strong consistent with underlying economic growth and the lower level of lending rates. The multi-year contraction in **housing loans to households** ended in 2025; the annual rate of change of housing loans turned positive in November 2025, for the first time since mid-2010.

In line with past ECB policy rate cuts, **bank lending rates** decreased significantly up to 2025; in 2026 lending rates increased slightly for corporate loans but they edged further down in the case of housing loans.

Financial markets

The developments in Greek sovereign and bank ratings have been positive, with further rating upgrades taking place in 2025. This is the result of sustained overperformance of the Greek economy in the fiscal and economic activity fronts, which also fosters the prospect of further rating upgrades.

Greek government bond yields in 2025 moved slightly up but less so than benchmark euro-area (EA) sovereign bond yields; as a result, yield differentials to EA benchmark sovereign bonds have narrowed, as GGBs have benefitted over-proportionally from a portfolio rebalancing in favour of EA assets since April 2025. In 2026-to-date, GGBs have moved broadly in line with EA benchmark bonds.

Greek bank and corporate bond yields in 2025 outperformed their EA counterparts rated at BBB, driving the cost of new issuances lower, and have remained resilient in 2026-to-date.

Greek shares posted a strong positive return in 2025 and have outperformed euro area peers in 2026-to-date, supported by robust economic growth and the resilience of the economy.

p: Bank of Greece projections.

In the latest projections energy commodity prices follow the technical assumptions based on the Futures markets (cut-off date 21 May 2026).

According to the baseline, the growth rate of the Greek economy in 2026 is projected to moderate to 1.9%, reflecting the intense uncertainty in the global economy due to the ongoing geo-economic crisis caused by the war in the Middle East and the consequent deterioration of assumptions about external demand, energy costs and prices in general. According to the baseline, energy commodity prices follow the technical assumptions with a cut-off date of 21 May 2026. In particular, it was assumed that energy prices would decline relatively rapidly in the course of the next few quarters, in line with futures prices at the cut off date.

However, the evolution of the conflict, together with its impact on energy prices, on the prices of some non-energy commodities and on economic activity, as well as the pass-through of the energy price shock to non-energy consumer prices, remain subject to considerable uncertainty.

The growth rate of the Greek economy over the forecast horizon (2026-2028) is estimated to remain higher than the euro area average and therefore consistent with the continuation of the real convergence process.

According to the baseline, real GDP is expected to increase by 1.9% in 2027 and 2.0% in 2028, assuming that on the one hand the uncertainty related to the war in the Middle East subsides and on the other hand the Greek economy will continue to be strengthened by the implementation of the necessary reforms, international tourism, continued investment and the stable growth prospects of the euro area. Throughout the forecast period, the main component of growth, in terms of contribution, is expected to be private consumption, while investment and exports will also continue to contribute positively.

More specifically, **private consumption** is expected to grow at an average rate of 1.9% over the forecast period. Private consumption is supported by the strengthening of real disposable household income, as employment is expected to continue to recover, wages to increase and inflation after 2026 to gradually decline. The contribution of public consumption to growth in the coming years is expected to be marginally positive.

In 2026, **investments** are projected to grow by 5.8%, supported by the use of RRF resources, strong credit growth and increased foreign direct investment inflows. In 2027-28, with the end of the NGEU implementation period, the growth rate of investments is expected to moderate, but investments will continue to contribute positively to the growth momentum of the Greek economy and to the closing of the investment gap. In 2028, at the end of the forecast period, they are projected to exceed 19% of real GDP.

However, in 2026, the **contribution of the external sector to GDP** is estimated to be negative, due to the effects of the war in the Middle East on global trade, the high share of oil in the country's trade balance, but also due to the intense investment activity, which is causing a rapid increase in imports, attributed to the

high import content of investments.

The **unemployment rate** is estimated to decline to 8.2% in 2026 and is then expected to decline further to 7.6% in 2028, reflecting the ongoing recovery of economic activity in the coming years.

In 2026, **HICP inflation** is projected to reach 3.8%, compared to 2.9% in 2025. The positive output gap in the Greek economy, with demand exceeding production capacity, as well as exogenous shocks, such as the increase in international energy prices due to the war in the Middle East, are fuelling the inflationary dynamics. Inflation is expected to slow to 2.6% in 2027, assuming that the Middle East hostilities ease and inflation expectations decline. Inflation is expected to decline to 2.3% in 2028 due to a significant slowdown in energy and food components.

The **current account balance deficit** is expected to worsen in 2026, due to the increase in fuel prices, before returning to a downward trajectory from 2027 onwards. In addition, for 2026, the estimated increase in domestic investment, co-assisted by the projects financed by the RRF, will contribute to the increase in imports of investment goods and consequently to the deterioration of the goods balance. Inflows from both the RRF in 2026 and the multiannual financial framework (MFF) in the following years will offset to some extent the above developments. Furthermore, the increase in tourist arrivals, combined with the extension of the tourist season, the opening up of new tourist markets and the continued momentum in cruise tourism will contribute to the further increase from 2027 onwards in receipts from travel services. However, developments in the current account balance remain subject to significant risks.

The **risks surrounding the baseline** are mainly on the downside and are linked to a prolongation of the war in the Middle East. Further downside risks to growth are related to more persistent inflationary pressures, potential natural disasters linked to the impacts of the climate crisis, a lower-than-expected absorption and utilization rate of RRF funds, and a slower-than-expected implementation of the necessary reforms, which would have adverse effects on the productivity of the Greek economy.

Despite a recent rise in oil prices due to renewed tensions in the Middle East, the energy prices are currently still notably lower vs those included in the latest projections (cut off date 21 May). This points to a more favourable outlook for the Greek economy. According to this scenario, it is projected that the GDP growth rate will be 2.0% in 2026 and 2.1% in 2027 and 2028, while HICP inflation will be 3.7% in 2026, 2.5% in 2027, and 2.2% in 2028.¹

¹Based on the milder scenario assumptions, oil prices are set at 88 USD/barrel in 2026:Q3, i.e. a 15% decrease compared to the baseline, while in 2028:Q4 they are projected to be set at 64 USD/barrel, i.e. a 16% decrease compared to the baseline. Correspondingly, natural gas prices are set at 41 EUR/MWh in 2026: Q3, i.e. a 16% decrease compared to the baseline, while in 2028: Q4 they are projected to be set at 20 EUR/MWh, i.e. a 22% decrease compared to the baseline.

Source: ECB, "Eurosystem staff macroeconomic projections for the euro area", June 2026.

Supportive EU and ECB policies and measures

Following the termination of the NGEU scheme in 2026, alternative European funding sources will be available for Greece to support the positive investment dynamics. Main European structural funding schemes available as of 2027 will be the current Public Investment Program, the new European Multiannual Financial Framework (MFF 2028-2034) under negotiation (Greece allocation in the order of €49.2 bn), as well as new European resources (of €8 bn) from the Social Climate Fund, the Modernization Fund and the Islands Decarbonization Fund secured by Greece.

Key Challenges

Short-term economic policy challenges:

- Controlling inflation.
- Accelerating investment, in part by mobilizing available European resources.
- Addressing emerging labour market shortages and skills mismatch.
- Designing climate adaptation strategies and disaster preventive measures.
- Ensuring energy security through investment in clean energy.
- Maintaining fiscal sustainability.

Medium to long-term economic policy challenges:

- Maintaining primary surpluses over an extended horizon to ensure public debt sustainability.
- Implementing structural reforms to support long-term growth.
- Addressing the current account deficit through (a) the strengthening of the Greek economy's competitiveness and (b) a widening of its export base with high value added goods and services.
- Maintaining the pace of reforms programme and continuing to improve the management of state assets in order to attract foreign direct investment.
- Promoting innovation, education and knowledge-based capital.

Source: ELSTAT and Bank of Greece calculations.

¹ Annual national accounts data are non-seasonally adjusted, while quarterly national accounts data are seasonally adjusted.

² Both annual and quarterly data are non-seasonally adjusted. Deflated using private consumption deflator.

³ Savings and net capital transfers of households and non-financial corporations, at current prices, non-seasonally adjusted.

Economic activity continued growing in 2026:Q1 supported by gross fixed capital formation, private consumption and net exports.

Real GDP increased by 2.0% y-o-y in 2026:Q1 mainly driven by the acceleration in investment growth (12.1% y-o-y a contribution 2.0 pp), a rise in private consumption (0.7% y-o-y; a contribution 0.5 pp) and a positive net exports' contribution (0.6 pp).

Gross fixed capital formation accelerated to 12.1% y-o-y in 2026:Q1 due to a rise across most investment products, i.e. machinery equipment (16.2% y-o-y), transport equipment (15.3%), as well as housing (15.0% y-o-y) and other constructions investment (18.1% y-o-y).

Output (as measured by gross value added) increased in 2026:Q1 due to the positive contribution of the industrial, the construction and the services sectors (0.7 pp, 0.3 pp and 0.8 pp, respectively) (see Chart 2).

Nominal **disposable income of households strongly increased** by 9.8% y-o-y in 2025:Q4 (+6.8% y-o-y in real terms). For 2025 as a whole, it rose by 5.3% on average mainly due to the positive contribution of labour income (i.e. compensation of employees and self-employed income), while real disposable income of households increased by 1.8%, down from 2.3% in 2024, reflecting the effect of the elevated rate of private consumption deflator.

Savings and net capital transfers of the non-financial private sector increased to 6.4% of GDP in 2025, up from 6.1% in 2024, reflecting improved savings by non-financial corporations (NFCs), while household dissaving stabilized. In particular:

Household dissaving remained steady in 2025 (-1.5% of GDP), unchanged from 2024, as the growth rate of disposable income (5.3%) remained close to the expansion of private consumption (5.5%). More specifically, persistent inflationary pressures, elevated consumer spending, and the repayment of tax

liabilities and social security contributions exerted downward pressure on household savings, thereby maintaining them in negative territory. Nevertheless, household dissaving showed some improvement compared with its pre-pandemic average of -2.2% of GDP over the period 2016–2019, thanks to the positive contribution of the net capital transfers.

NFC's savings (retained earnings), comprising net capital transfers, increased to 7.9% of GDP in 2025, up from 7.6% in 2024, slightly exceeding their 2016–2019 average of 7.8% of GDP. This development reflects the strong performance of the tourism, construction, and industrial sectors, as well as the favourable trajectory of the Greek economy within a stable political and macroeconomic environment, supported by grants from the Recovery and Resilience Facility (RRF).

Sources: European Commission for ESI (Economic Sentiment Indicator) and Consumer confidence, S&P Global for Manufacturing PMI (Purchasing Managers' Index), ELSTAT for Industrial production, Manufacturing production, Turnover of Enterprises, Building permits, Retail sales and New car registrations, Ministry of Finance for VAT revenues, Eurostat for Services production index, and Frontier Survey of the Bank of Greece for non-residents' arrivals and travel receipts.

1 Monthly data on the turnover of enterprises are available for enterprises obliged to double-entry accounting bookkeeping, while annual data refer to the turnover of enterprises and activities of the economy as a whole.

² Data deflated with CPI.

Soft data stand at high levels pointing to a continuation of growth and remaining above euro area average.

The **Economic Sentiment Indicator (ESI)** increased in June due to an improvement in business expectations in the services sector; by contrast, business expectations receded in the manufacturing, retail trade and construction sectors and consumer confidence declined.

The June **Manufacturing PMI** (Purchasing Managers' Index) was higher than in May, signalling the fastest improvement in the Greek manufacturing sector in 3 months amid steeper increases in production levels and stronger domestic demand. At the same time, employment and input buying rose and business confidence was positive. On the prices front, higher raw material, transportation and energy prices pushed input costs up again in June, but at the slowest rate in four months. Output prices also increased at a softer pace, which was though the second-fastest since July 2022.

Hard data are overall positive.

Industrial production, following its good performance in 2025, continued on an upward path in the January-May 2026 period due to the rise in manufacturing production and electricity supply.

Manufacturing production growth, in 2026:5M, can be attributed to the increase in production across many sectors and in particular in "food", "coke and refined petroleum products" and "basic pharmaceutical products and pharmaceutical preparations" sectors.

The turnover of enterprises, obliged to double-entry accounting book keeping, increased in May 2026 by 6.9% y-o-y mainly due to higher turnover in manufacturing (15.8% y-o-y), construction (16.3% y-o-y) and accommodation and food services sector (15.7% y-o-y); in the January-May 2026 period, the turnover of enterprises increased by 5.4% y-o-y.

The volume of building permits declined in 2025 possibly due to planning and building regulatory uncertainty and high construction costs. In 2026:Q1, they registered a strong increase, in year on year terms, largely attributed to a base effect.

VAT revenues at constant prices, which is an encompassing indicator for private consumption, increased

in May 2026 and in the January-May 2026 period indicating consumption growth.

The **retail sales volume index** marginally declined in April due to a fall in “automotive fuel”, “clothing and footwear” and “books, stationery and other goods” sub-indices, but increased in the January-April 2026 period pointing to rising consumption.

New private passenger car registrations strongly increased in June 2026 and in the January-June 2026 period due to a rise in both private and corporate car sales.

Greece recorded an annual increase of 2.5% in the **services production index** in January-April 2026, outperforming the EU (1.2%) with accommodation and food services leading the way. Specifically, the accommodation and food services sector saw an increase of 15.9% y-o-y in January-April 2026, compared to -0.9% y-o-y in the EU.

Travel receipts (at nominal prices) and **non-residents’ arrivals** increased significantly during the period January-April 2026, by 41.8% and 27.1%, respectively. In April, travel receipts grew by 9.5%, while non-residents’ arrivals recorded a double-digit increase of 10.6%, indicating that the strong momentum observed earlier in the year was sustained, despite geopolitical uncertainty across parts of the wider region during March and April. According to ETC (2026)², Greece ranks among Europe’s top five travel destinations for the summer of 2026, due to higher demand for tourism in Southern and Mediterranean Europe, as safety remains the leading factor influencing destination choice.

International arrivals at Greek airports recorded a 5.0% y-o-y increase in 2026:H1 (see Chart 8), while international passenger traffic at the Athens International Airport surged by 4.2% y-o-y in the same period.

Sources: ELSTAT, EUROSTAT and Bank of Greece computations.

HICP headline inflation stood at 2.9% on average in 2025, having been shaped mainly by elevated services inflation. Services inflation also retained core inflation at elevated levels in 2025 (3.6%). For the first six months of 2026, headline inflation reversed course increasing on average to 3.8%, mainly attributed to huge increases in energy prices.

HICP headline inflation declined to 3.9% in June 2026 from 4.9% in May. This development is attributed to declines in services inflation (4.5% in June from 5.7% in May), energy inflation (14.7% from 20.0%) and unprocessed food inflation (5.1% from 6.5%).

Core inflation (HICP excluding energy and food) also declined to 3.2% in June 2026 from 3.9% in May because of the significant decline in services inflation, as a result of declines in inflation in accommodation, air transport and rents.

Producer Price Index (PPI) inflation for the domestic market was in negative territory in the first two months of 2026, but returned to positive ground in the period March-May 2026, being in line with developments in energy inflation.

Import price inflation also moved in line with developments in energy inflation and stood at 13.3% in May 2026 from 18.4% in April.

Domestic price pressures, as captured by changes in GDP deflator, had started increasing in 2021 and picked up further in 2022 and 2023. Up to mid-2023, unit profits had contributed the largest share of the increase in the GDP deflator showing that firms had managed to pass on cost shocks associated with the surge in energy and other intermediate production prices to final prices. In 2024 and 2025 period, the GDP deflator remained relatively elevated largely on account of the rise in unit labour costs. In 2026:Q1, unit profits were again the main driver of the rise in GDP deflator.

Sources: Bank of Greece, ELSTAT.

Real estate prices are still growing.

In 2025, **housing property prices** continued to increase strongly, albeit at a slower pace than in 2024, driven by both external and internal demand.

Apartment prices further increased in 2026:Q1 by 5.7% y-o-y (see Chart 12). Broken down by property age, in 2026:Q1, a stronger rate of increase was recorded in new apartment prices (up to 5 years old) by an average of 6.0% y-o-y, compared with the corresponding increase in old apartment prices (5.5% y-o-y). By geographical area, the average annual growth stood at 5.2% in Athens and 6.4% in Thessaloniki.

Residential investment (ELSTAT data, seasonally adjusted at constant prices) increased by 15.0% y-o-y in 2026:Q1 and stood at 2.7% as a percentage of GDP (see Chart 13).

In 2025:H2, **prime office prices** increased by 5.1% y-o-y and **prime retail prices** increased by 4.7% y-o-y. An increase was also recorded in both office and retail rents, by 1.9% and 3.8% y-o-y, respectively (see Charts 14 and 15).

Based on the Commercial Property Market Survey, conducted by the Bank of Greece, in 2025:H2 **prime office yields** ranged between 5.6% and 6.6% (Athens Central Business District), slightly lower compared to the previous half-year, while **prime retail yields** ranged between 5.2% and 6.0% (Ermou Str., Athens).

With **housing affordability** emerging as a critical issue, several government initiatives are currently in progress, including inter alia: (i) “My Home II” program which provides financial support for the acquisition of prime residence from the National Recovery and Resilience Plan (NRRP) funds; (ii) the rent reimbursement program, which provides refund of a single monthly rent to eligible tenants based on income criteria and (iii) the new “Housing Renovation” scheme, a government subsidy program for low- and middle-income households, which provides grants for the renovation and mild energy upgrade of eligible dwellings, aiming to reactivate vacant housing stock and increase the supply of homes available for long-term rental or owner occupation. It should be noted that the ‘My Home II’ programme has been extended until 31 August 2026 (previous deadline: 31 May 2026); however, the extension applies exclusively to already approved applicants, in order to complete the remaining procedures, including the signing of loan agreements.

¹ Monthly and quarterly LFS data are not compatible due to the different survey samples. Employment growth and unemployment rates on an annual and quarterly frequency are based on non-seasonally adjusted data, while monthly employment growth and unemployment rates are based on seasonally adjusted data.

² Annual data on labour costs are non-seasonally adjusted, while quarterly data are seasonally adjusted.

³ Compensation per employee (real) is deflated by the private consumption deflator.

Sources: ELSTAT (Labour Force Survey and Labour Costs), Ministry of Labour and Social Security (ERGANI Information System), Public Service of Employment - DYPA (Registered unemployed), European Commission (Employment Expectations Index).

Labour market developments remain positive, with employment rising and unemployment falling, but there are challenges related to labour market tightness.

Total employment rose in 2026:Q1, mainly due to employment growth in manufacturing, tourism, and administrative, support and professional services sectors. Latest monthly Labour Force Survey (LFS) data suggest that employment (sa) increased in May 2026 compared to May 2025.

The **unemployment rate** increased in 2026:Q1 by 0.2 pp compared to 2025:Q1. The share of long-term unemployed decreased by 1.7 pp. In May 2026, the unemployment rate (sa) decreased significantly compared to both the previous month and May 2025.

Dependent employment flows in the private sector (Ministry of Labour, ERGANI Information System) were positive in the January-May 2026 period and higher compared to the corresponding period of 2025. In May 2026, dependent employment net flows in the private sector were positive due to hiring in hotels and restaurants.

The **number of registered unemployed (DYPA data)** decreased in May 2026 due to a decline in the number of both long-term and short-term unemployed. The number of those receiving unemployment benefits decreased compared to the previous month.

The **Employment Expectations Index** (European Commission) increased in June 2026 compared to May 2026, due to an improvement of employment expectations in all sectors except for construction.

According to Eurostat, the **tightness in the labour market** depicted signs of easing in the last quarters of 2024 and in 2025, but remained at high levels. In 2026:Q1, the job vacancy rate reached 2.1%, from 2.2% in 2025:Q1 (nsa data). The highest vacancy rates were recorded in construction, accommodation and food service activities and in administrative and support service activities.

Labour costs are rising.

Compensation per employee (sa) increased by 3.3% y-o-y in 2026:Q1 as compensation of employees increased by 4.5%, while the number of employees (national accounts definition) increased by 1.2%.

Real compensation per employee (sa) remained constant in 2026:Q1 as the private consumption deflator increased at the same rate with the nominal compensation per employee (3.3%).

Unit Labour Costs (ULC) increased in 2026:Q1, but at a lower rate compared to the corresponding quarter of 2025, as nominal compensation per employee decelerated, while real labour productivity remained broadly constant.

Outlays for the remuneration of employees in the general government (incl. social security contributions) rose by 6.5% y-o-y in January-May 2026. They had risen by 3.5% in 2025 as a whole.

According to annual accounts data from the **ERGANI information system**, the average monthly earnings stood at €1,362.66 in 2025, increasing by 1.5% compared to 2024. Accordingly, the number of employees earning more than €1000 per month increased. In particular, compared to 2024, the number of employees with salaries between €1001-1200 per month increased by 29.2%. Also, reflecting the rise of the minimum wage to €880, the share of employees earning less than €1000 per month (gross) fell to 36.5%, from 46.3% in 2024.

Note: Labour productivity is real GDP (2020 prices) per employed persons. Compensation per employee is compensation of employees divided by the number of employees (national accounts definition).

Collective wage agreements

In January-May 2026, 118 new firm-level agreements were signed, covering 84,458 employees; of these, 53 agreements provided for wage increases, whereas the rest did not provide for any wage changes.

In 2025, 208 new firm-level agreements had been signed, covering 130,669 employees; of these, 80 agreements provided for wage increases, whereas the rest did not provide for any wage changes.

Recent selected wage agreements:

On 11 May 2026, the collective agreements for employees in confectionery enterprises and for employees in food and tourist enterprises were declared generally binding (for the relevant sectors) by decisions of the Minister of Labor.

In March 2026, three important agreements were signed: **a three-year one for employees in confectionery enterprises** providing for wage increases exceeding 20% on a cumulative basis, **a two-year one for employees in food and tourist enterprises** providing for wage increases of 7% to 20%, and **a one-year one for employees in bakeries**.

In July 2025, **a three-year agreement for employees in private insurance enterprises** provided for a 4.0% wage increase as of 1 Jan. 2025, a 3.0% as of 1 Jan. 2026 and a 2.0% as of 1 Jan. 2027.

In April 2025, **a three-year agreement for banks** provided for increases of 2% as of 1 Jul. 2025, 2.0% as of 1 Dec. 2025, 2.0% as of 1 Dec. 2026 and 2.0% as of 1 Dec. 2027.

In February 2025, **a two-year agreement for hotel employees** provided for a 5% wage increase as of 1 Jan. 2025 and a 3.0% as of 1 Jan. 2026.

Minimum wages

The statutory minimum wage rate increased by 4.5% as of 1 April 2026, bringing the minimum monthly salary to €920. Previous minimum wage increases: in 2025 (6.0%), in 2024 (6.4%), in 2023 (9.4%), in 2022 (9.5%), in 2019 (11%). **Overall, since end-2018, the minimum wage increased by a total of 57.0%.**

On December 5, 2024, a law was voted that incorporates the European Directive 2022/2041 on adequate minimum wages in the European Union and introduces a new way of calculating the statutory minimum wage and minimum daily wage. The new calculation method will apply from 2028 and the minimum wage will cover all private and public sector employees. In particular, the minimum wage and the minimum daily wage are adjusted, after consultation conducted every year, based on a rate resulting from the sum a) of the annual rate of change in the consumer price index between July 1 of the previous year and June 30 of the current year for the lower twenty percent (20%) of the household income distribution and b) half of the annual percentage change in the purchasing power of the general wage index over the same time period. Also, the law introduces provisions to strengthen the role of social partners in the wage determination process, as well as regulations to strengthen collective bargaining.

Labour market policies

From January 1, 2025, **insurance contributions** have been reduced by 1 percentage point (0.5 percentage points in employee contributions and 0.5 percentage points in employer contributions), which will contribute to strengthening the competitiveness of Greek businesses and maintaining jobs.

The new labour law (L.5239/17.10.2025) includes provisions aimed at modernizing labour regulations, easy and quick recruitment, reducing bureaucracy, strengthening health and safety at work, strengthening the Labour Inspectorate, harmonizing the Greek labour law with the international conventions of the International Labour Organization (ILO), while various new social security provisions are also included. In particular, among other things, the following are included: a) extension of the possibility of 13-hour employment with one employer and the legalization of overtime in intermittent jobs with a 40% increase in the hourly wage paid, b) simplification of recruitment procedures and possibility of fast-track recruitment for work of up to 2 days, c) possibility of four-day work for working parents for the entire year and distribution of annual leave over several periods of time, d) tax-free parental leave allowance, uniform recognition of insurance time for pregnancy and childbirth allowance and extension of the maternity leave to foster mothers, e) optimization of the operation of the Labour Inspectorate and stricter sanctions for obstructing control by the Labour Inspectorate, f) extension of the exemption of surcharges from insurance contributions.

L.5278/16.2.2026 includes provisions to increase the coverage of employees by collective labour agreements. The main axes of the law are the facilitation of the extension of collective bargaining agreements, the full protection of employees after the expiration of the wage agreement, and the acceleration of dispute resolution procedures through the mediation and arbitration organization (OMED).

4. EXTERNAL BALANCES, COMPETITIVENESS

4.1 Current account

	2023	2024	2025	2025	2026	2025	2026

* Exports and imports are deflated by Producer Price Index (PPI) and Imports Price Index (IPI), respectively.

Source: Bank of Greece, ELSTAT and Bank of Greece calculations.

In the first four months of 2026, the current account deficit widened.

In **January-April 2026**, the current account deficit widened y-o-y, owing to a deterioration mostly in the secondary and primary income accounts, which was partly offset by an improvement in the goods and services balances.

Real exports of fuel and non-fuel goods increased. Food, beverages and tobacco, pharmaceutical products as well as machinery mainly contributed to the increase in the non-fuel exports.

Real imports of non-fuel goods recorded an increase, mainly driven by imports of capital goods and transportation equipment as well as of non-durable consumer goods, while real imports of fuel goods decreased.

The surplus of the **services balance** widened, mainly due to an improvement in the travel balance, which was offset to some extent by a deterioration in the balances of other services and transport. **Non-residents' arrivals** and travel **receipts** increased by 27.1% and 41.8% y-o-y, respectively.

The **transport surplus** posted a decrease, despite the fact that sea transport receipts grew as freight rates (based on the ClarkSea Index) increased by 66.1% y-o-y; dry bulk rates increased by 52.0% y-o-y and tanker rates by 214.2% y-o-y.

The deficit of **primary income account** widened mainly because net receipts from other primary income almost halved, reflecting lower EU agricultural subsidies. A deterioration was also recorded in the **secondary income balance** due to a lower inflow from the reallocation of the Eurosystem's monetary income to the Bank of Greece.

In **April 2026**, the current account deficit decreased y-o-y, due to improvements in the goods and secondary income balances and, to a lesser extent, in the primary income balance, while the services balance recorded a slight deterioration.

The surplus of the **services balance** recorded a small decrease, due to the recording of net payments against net receipts in the other services balance, despite the improvement in the transport balance and, to a lesser extent, the travel balance. **Non-residents' arrivals** and travel **receipts** increased by 10.6% and 9.5% y-o-y, respectively.

In January-April 2026, FDI inflows reached €4.3 mn. They reflected mainly investments in new shares and mergers and acquisitions including UniCredit's increased stake in Alpha Bank S.A.'s share capital which took place in January 2026.

EU funds

In April 2026, Greece received €121.4 mn from **structural funds** and €2.0 mn from **farmers' subsidies**.

The implementation of the **Multiannual Financial Framework (MFF)** 2021-2027 has been proceeding, though at a slow pace. According to EU data (as of June 30, 2026), €6.5 bn have been disbursed since the initiation of the programme.

Regarding the **Recovery and Resilience Facility (RRF)**, €12.9 bn in grants and €11.7 bn in loans have already been received by Greece since 2021 (NGEU including REPowerEU). In 2025, €3.4 bn in RRF grants and €1.8 bn in loans were disbursed, having completed the related milestones and targets, whereas on April 23, 2026 Greece received €0.9 bn in RRF grants and €0.3 bn in RRF loans. On May 8, the country submitted a modified National Recovery and Resilience Plan, as the RRF approaches its final phase of implementation and on May 26, Greece submitted a request for a €1.6 bn disbursement concerning both grants and loans.

Source: ECB

1: + appreciation of euro

2: + deterioration of competitiveness

Domestic Unit Labour Cost (ULC) growth rate remains lower than that of Greece's main trading partners. However, euro's appreciation led to losses in both price and cost competitiveness broad index since 2025:Q2.

The nominal effective exchange rate: Based on ECB Harmonised Competitiveness Indicators (HCIs), the nominal effective exchange rate (NEER) appreciation for Greece continued in 2026:Q2, however at a slower growth rate. **Price competitiveness** deteriorated in 2025, as the impact of the significant nominal appreciation of the euro was only partly offset by Greece's lower inflation relative to its main trading partners inside and outside eurozone. The continued, albeit smaller, appreciation of the euro up to 2026:Q2 in addition to the shift of Greece's inflation resulted to a lower deterioration.

Labour cost competitiveness: ULC-based competitiveness having improved significantly in 2022-2023, mainly driven by strong gains in productivity relative to Greece's main trading partners, posted a small deterioration in 2024 and 2025, negatively affected by the strong appreciation of the nominal effective exchange rate. In 2026:Q1, labour cost competitiveness posted a small deterioration associated with the continued appreciation of the NEER.

Non-price or structural competitiveness

Non price/structural competitiveness indices recently published provide a rather positive picture as progress in some areas is evident, namely in the tax wedge front, government effectiveness, business efficiency and digital transformation of the economy.

Latest publications on composite indices

Indicator	International Organization	Date published	Latest Ranking (Total countries)	Previous Ranking (Total countries)	Positions Moved
World Competitiveness Ranking	IMD	18.06.2026	50 (70)	50 (69)	-
	Greece's ranking remains stable, while its peer groups ranking rose by one position. Improvement was recorded in the sub-index of "international investment" (up to 43 rd from 46 th), "employment" (up to 54 th from 60 th) and "prices" (up to 30 th from 44 th), while deterioration was recorded in "domestic economy" (down to 54 th from 46 th), and "international trade" (down to 37 th from 42 nd). According to the IMD, the main challenges for Greece now include the following: containing increased inflation versus the euro area amid energy price pressures, easing financial conditions and broadening SMEs access to investment finance, scaling up innovation and AI adoption to drive industrial competitiveness, tackling skills mismatches and brain drain through Vocational Education and Training (VET) policies and upskilling and accelerating the digital and green transition while protecting industry from energy shocks.				
Business Ready (former Doing Business)	World Bank	02.01.2026	... (101)	... (50)	...
	Within Business Ready framework, there is no composite indicator and Greece ranks 2nd in regulatory framework pillar, 27th in public services pillar and 45th in the operational efficiency pillar (out of 101 countries). Greece performed strongly on the de jure dimension, however, there are persistent de facto shortcomings in implementation and compliance. Greece ranks above global average in the three dimensions but lags behind its EA peers in the de facto dimension. Greece performed strongly in "Business Entry", mainly due to electronic business registration systems and streamlined incorporation procedures. There is room for improvement in "Business Location", facing challenges in property transfer, gaps in land administration systems and burdensome registration procedures, and "Financial Services", experiencing gaps in credit and collateral information systems and inefficiencies in lending processes, security interest registration and e-payments.				

Indicator	International Organization	Date published	Latest Ranking (Total countries)	Previous Ranking (Total countries)	Positions Moved
Tax International Competitiveness Index	<i>Tax Foundation</i>	21.10.2025	23 (38)	26 (38)	+3
Greece's rank improved by three places and its overall absolute rank raised by 4.1 points as its personal, consumption and corporate taxes ranking improved, while property taxes and cross border tax rules ranking deteriorated. Strengths: The net personal tax rate of 5 percent on dividends is significantly below the OECD average of 24.7 percent; corporate income tax rate of 22 percent is below the OECD average of 24.2 percent; controlled foreign corporation rules in Greece are modest. Weaknesses: Companies are severely limited in the amount of net operating losses they can use to offset future profits; companies cannot use losses to reduce past taxable income; and VAT rate is one of the highest in the OECD applied to one of the narrowest bases, covering only 43 percent of final consumption.					

Latest publications on implementation of reforms

According to the newly published (May 2026) **In-Depth Review** of the European Commission, reform implementation has continued in 2025 although several structural bottlenecks continue to weight on competitiveness and long-term growth. The key reforms adopted are the following:

- **Tax administration:** Full rollout of the myDATA electronic book-keeping system supported the significant reduction of the VAT compliance gap; the introduction of a minimum income for businesses strengthened compliance in the taxation of self-employed; and the introduction of a digital work card to combat undeclared work.
- **Judicial and business-environment reforms:** Revised Code of Civil Procedure (effective since 1/2026) and ongoing digitalisation of the justice system to reduce delays.
- **Labour market:** The personal income tax reform introduced new tax-free thresholds for youth under 25, improved incentives for families and reduced steepness of the tax's progressivity to encourage participation of young persons, women and skilled workers.

For 2026 a new Code on Alternative Dispute Resolution Mechanisms is expected to alleviate the burden on courts. The ongoing reform of the Hellenic Cadastre together with the implementation of a fully digitalised and online property transfer system is expected to simplify and speed up property transfers. Business dynamism will be supported by further digitalization of firms, reduction of regulatory and administrative burden as well as of entry barriers in professional services and product markets and the completion of the spatial planning framework

The latest release of **OECD's Product Market Regulation indicator** (July 2024, revised in December 2025), which measures the distortions to competition, suggests that Greece noted the greatest improvement among the OECD members during the period 2018-2023 (see Chart 28). The regulatory framework of Greece is now close to the OECD average, as a result of significant reforms. However, there is considerable room to make the regulatory framework of the professional services (especially for lawyers) and retail sector more competition-friendly (see Chart 29). In addition, the country should consider improving its mechanisms for assessing the impact of new and existing laws and regulations on competition, address its high non-tariff trade barriers and further align the governance of state-owned enterprises with key OECD best practices aimed at ensuring a level playing field with private firms.

Chart 28: OECD Product Market Regulation Indicator

Source: OECD, 2024 Product Market Regulation (version revised in December 2025).

Notes: The PMR economy-wide indicator measures the regulatory barriers to firm entry and competition in a broad range of key policy areas, ranging from licensing and public procurement, to governance of State Owned Enterprises, price controls, evaluation of new and existing regulations, and foreign trade. The information used to construct the indicator is collected through a questionnaire. Low (high) values suggest few (many) regulatory barriers.

Chart 29: Regulation of services

Source: OECD, 2024 Product Market Regulation (version revised in December 2025).

Note: The professional services indicators cover information on entry requirements and conduct constraints, whereas the retail trade indicators cover a broad set of regulatory issues, ranging from shop opening hours to retail price regulation, and licensing. Low (high) values suggest few (many) regulatory barriers.

5. FISCAL DEVELOPMENTS

Table 5.1: General Government fiscal outlook (% of GDP)

	2024	2025	2026	2027	2028	2029
Medium-Term Fiscal Structural Plan 2025-2028 (Oct 2024)

Budget 2026 (Nov 2025)/Multi-Annual Fiscal Programme 2026-2029 (Dec 2025)						
Primary balance	4.7*	3.7	2.8	2.7	2.7	2.7
Public Debt	154.2*	145.9	138.2	131.7	124.6	119.0
Net nationally financed primary expenditure (growth rate)	-0.2	4.4	5.7	2.9	2.7	2.4
2026 Annual Progress Report (Apr 2026)						
Primary balance	4.8*	4.9*	3.2			
Public Debt	154.2*	146.1*	136.8			
Net nationally financed primary expenditure (growth rate)	-0.1	2.9	7.5			

Sources : ELSTAT (*) and Ministry of Finance.

Notes : (a) The debt projections of the Medium-Term Fiscal Structural Plan (16.10.2024) are not presented as they are not consistent with the methodological change in the recording of public debt introduced in the 2nd EDP Notification of 2024 (22.10.2024).

(b) Net nationally financed primary expenditure is defined as government expenditures minus (1) interest expenditures, (2) programs financed by the EU, (3) national contribution to programs financed by the EU, (4) cyclical elements of unemployment benefit expenditures, (5) one off expenditure and (6) increases in net revenue attributable to discretionary revenue measures.

The general government outcome in 2025 was confirmed among the highest in the EU and the debt ratio decreased significantly

The 2025 general government balance, as published in the context of the 1st EDP notification (22.04.2026), turned to a surplus of 1.7% of GDP, higher than the pre-pandemic level. Also, the **general government primary outcome** recorded a surplus of 4.9% of GDP (marginally higher than 4.8% of GDP recorded for 2024). The debt decreased by €2.0 bn and the debt to GDP ratio decreased by 8.0 pps of GDP (lowest ratio than 2010). Among the EU countries, Greece recorded the highest primary surplus and public debt decrease.

Primary balance overperformance in 2025 is expected to partly carry over in 2026 and public debt is expected to decelerate further.

According to the **2026 Annual Progress Report (April 2026)**, a primary surplus of 3.2% of GDP is expected in 2026 (from 2.8% of GDP in the 2026 Budget). As regards the growth rate of net nationally financed primary expenditure, it was revised upwards to 7.5% (from 5.7% foreseen in the 2026 Budget and against 3.6% in the MTFs) allowing the adoption of temporary mostly targeted energy measures (0.2% of GDP) as well as permanent targeted income support measures (0.1% of GDP – see below). This upward revision is mainly due to the permanent nature of part of the better performance in 2025, subject to the restrictions imposed by the new fiscal rules on the upper limit on the annual growth rate. Public debt is expected to further decelerate at 136.8% of GDP, on account of the primary surplus, favorable interest growth rate differential as well as the earlier repayment of GLF loans (€6 bn).

New energy measures do not compromise fiscal sustainability due to strong 2025 performance

To alleviate the effects of the increases in energy prices due to the war in the Middle East, temporary expansionary fiscal measures were announced in March, for April and May 2026, amounting to €0.3 bn (or 0.1% of GDP), which include subsidization of diesel fuel, fertilizers, discounted fares in ferries and transport costs (fuel pass). To offset part of the fiscal cost, a tax rate increase was announced on the profits from online gambling over €100, with an estimated yield of €50 mn for 2026 and €100 mn yearly thereafter. The fiscal expansion due to the announced energy measures for 2026 is thus estimated at €0.25 bn (or 0.1% of GDP). Additional measures amounting €500 mn were decided in April and include an extension of the subsidy for farmers to offset for higher fertiliser costs – 15% off for three months (€26 mn), a permanent increase in targeted income support for low income pensioners (€200 mn), permanent broader eligibility

criteria for the residential rent subsidy (€25mn) and one off targeted income support to low income families in June (€240 mn). **The fiscal cost for 2026 is estimated at €800 mn and will be financed mainly by the 2025 fiscal overperformance.**

RRF funds are being absorbed yet backloading is witnessed

Absorption: Greece is progressing well compared to peers regarding the **RRF receipts based** on the successfully completion of the respective **milestones and targets**. Overall, Greece has so far received €24.6 bn from the RRF (€12.9 bn for grants and €11.7 bn for loans), that is 69% out of the total envelope of €36 bn (above EU average 71%), having successfully completed 53% of the total landmarks. The final date for the completion of landmarks is 31 August 2026, with a view to complete all payments by the end of the year. In May, Greece submitted a joint request amounting to €1.63 bn, referring to the 7th loan (€0.77 bn) and 8th grant (€0.86 bn) payments.

Execution: The implementation plan has become more backloaded than originally projected mainly due to administrative burden heavier than originally anticipated, as also witnessed in most EU countries. In May 2026, a proposal for the revision of the National Plan "Greece 2.0" was submitted to the European Commission, within the framework of the final phase of the implementation of the RRF. More specifically, with regards to implementation:

Grants: Out of a total envelope of €18.2 bn, cash receipts from the EU amount to €12.9 bn. Until December 2025, €8.9 bn had been disbursed to the final beneficiaries. Another €7.2 bn had been transferred from the state to other entities inside and outside the general government until June 2026.

Loans: Out of a total envelope of €17.7 bn, cash receipts from the EU amount to €11.7 bn. Until June 2026 €6.4 bn had been disbursed to the final beneficiaries. The contracted projects reached €13.2 bn (the 29th of May 2026 was set as the deadline for new contracts) satisfying the required milestone for the submission of all the remaining payment claims.

Reform and Investment projects relating to all four pillars of the **National Recovery and Resilience Plan** are in progress. Most notably major projects that have been funded by RRF grants so far concern: household energy upgrades, national reforestation plan, water management, electrical interconnection of islands, electric energy storage facilities, telecommunications (microsatellites network), digital transformation of SMEs, upskilling and reskilling of unemployed, active labor market policies reform, digitalization of education, hospital renovations, primary health care reforms, economic transformation of the Agricultural sector, road safety and construction of central Greece highway.

Source: ELSTAT, *PDMA estimates (Quarterly Debt Bulletin 121, March 2026)

According to the 1st EDP notification (22.04.2026), **both the general government balance and the primary balance marked an improvement in 2025 relative to 2024**, turning into higher surpluses as a share of GDP and overshooting the annual targets, largely as a result of satisfactory growth in the economy as well as strong tax revenue performance.

The improvement in the **primary balance in 2025** reflects an increase in the share of revenue (by 0.55 p.p.), marginally exceeding the increase in the share of primary expenditure as a % of GDP (by 0.48 p.p.). Y-o-y, primary expenditure increased by 6.0%, mainly driven by an increase in (a) public investment (17.8%), (b) capital transfers (14.7%) largely due to increased RRF expenditure and the OPEKEPE fine (€427 mn), (c) intermediate consumption (+15.0%), due to higher prices and increased EOPYY payments to public hospitals and (d) social payments (+3.0%) due to pension indexation and pension arrears clearance. In the opposite direction, there was a decrease in subsidies (-2.5%). Revenue also increased y-o-y (+6.1%) due to increased economic activity, price increases, higher public hospital revenue and tax evasion containment due to the various digitalization measures.

The **debt to GDP ratio** decreased to 146.1% in 2025, from 154.2% of GDP in 2024 (lowest since 2010), due to both the denominator effect (higher nominal GDP) and to a lower level of debt.

Given that debt in nominal terms in 2025 came in broadly in line with the 2026 Budget Report, the recorded over-performance in the budget surplus was not used to repay debt but was accumulated in the form of **cash reserves** (increased to €40 bn from €36 bn).

According to PDMA estimates, in 2026: Q1, public debt stood at €360.5 bn (or 137.8% of GDP) compared to €362.9 bn (or 146.1% of GDP) at end-2025, while general government cash reserves stood at €38.9 bn (or 14.9% of GDP) compared to €39.6 bn (or 15.9% of GDP) at end-2025. The weighted average maturity of public debt stood at 18.4 years and the time to the next refixing³ of the debt portfolio at 17.8 years, both broadly unchanged since end-2025. The cost of debt, as measured by the actual general government debt annual interest payments after swap (cash basis) as a proportion of public debt stood at 1.38%.

Chart 34: General government primary balance (quarterly, cumulative) (% of GDP)

General Government cash fiscal data – In line with the revised annual target in ESA terms.

Table 5.3: Cash fiscal data

(% GDP)	2025 Jan-May	2026 Jan-May	2025 Jan-June	2026 Jan-June
General Government primary balance	2.0	1.9		
Stock of arrears (€ bn)	3.7	3.7		
State budget primary balance	2.0	1.4	1.8	1.7
State budget primary balance period target	0.4	0.5	0.9	0.7

Source: Ministry of Finance

In the January-May 2026 period, the **primary general government cash outcome** recorded a marginally lower primary surplus compared to the one achieved in January-May 2025.

In May 2026, the **stock of arrears** (excluding main pension claims) increased by €0.4 bn (mainly in hospitals)

³³ The time to next refixing measures the weighted average time until all the principal payments in government debt become subject to a new, updated interest rate.

compared to December 2025. About 50% of total arrears (excluding tax refunds) originate in hospitals due to their reporting pre-clawback⁴. Post-clawback, hospital arrears are much lower.

The **State primary balance** in January-June 2026 recorded a surplus (1.7% of GDP), marginally lower than in the respective period in 2025. Compared to the period target (according to the 2026 Budget), the primary balance over-performed by €2.5 bn due to both revenue overperformance and primary expenditure containment.

Financing

According to PDMA's funding strategy for 2026, the Hellenic Republic plans to issue €8 bn in GGBs in 2026. So far in 2026, it has borrowed approximately the total amount from the capital markets. More specifically, in January 2026, Greece attracted €4 bn from the issue of a 10-year bond with a yield of 3.47%. In February, April and June further €0.3 bn, €0.25 bn and €3 bn were raised through the re-opening of the 10-year bond issued in January, with a yield of 3.34%, 3.70% and 3.80% respectively. In June, the Hellenic Republic proceeded with the early repayment of debt amounting to €6.94 bn.

Debt Sustainability Analysis - Risks to debt sustainability remain contained in the medium term

This mainly reflects (i) the highly concessional terms of official sector loans (involving grace periods, long maturities and interest deferrals) comprising the bulk of the accumulated debt stock, (ii) a 100% share of fixed-rate debt of the central government (at end-March 2026) and (iii) a very sizeable cash buffer in excess of 15% of GDP (at end-March 2026). In the longer term, however, sustainability risks remain elevated. As concessional loans get rolled over on market terms, exposure to adverse shocks will increase, demanding firm commitment to fiscal vigilance. Under the baseline assumptions of commitment to fiscal targets and effective utilization of European funds, the debt to GDP ratio remains firmly on a downward trajectory and Gross Financing Needs over GDP stay safely below the 15% and 20% thresholds.

Chart 36: General Government Maastricht debt
(% of GDP)

Source: Bank of Greece.

Chart 37: General Government Gross Financing Needs
(% of GDP)

Source: Bank of Greece.

⁴The clawback mechanism, introduced by the Greek legislator in 2012 as part of the effort to reduce excessive health expenditure weighing on public debt, safeguards the level of public expenditure relating to hospitalization and pharmaceuticals up to a certain pecuniary limit. Essentially, when the respective public spending exceeds the thresholds of the relevant closed budgets, any surplus is 'repaid' by hospitals and pharmaceutical companies to the National Organisation for Healthcare (EOPYY), on the basis of a specific formula. When hospital arrears are reported pre-clawback, they are inflated as they do not take into account the surplus repayment to EOPYY.

Fiscal Structural Reforms boosted tax revenues

In recent years, a broader, ongoing programme for the **modernisation and digitalisation of public administration** has been implemented, with the aim of enhancing operational efficiency, transparency and tax compliance. In 2024, the measures adopted in this direction included enhanced information exchange between businesses and the Independent Authority for Public Revenue (IAPR) regarding electronic transactions (interconnection of cash registers and POS systems, development of key digital tools and expansion of electronic payments), as well as the presumptive taxation of self-employed professionals.

During 2025, these efforts were further accelerated: the **Digital Customer Registry** was upgraded, **monthly VAT return filing** was extended to self-employed professionals, businesses keeping simplified accounting books and newly established enterprises, and the **mandatory use of the IRIS** system via QR code by all businesses was introduced. At the same time, the universal implementation of **e-Invoicing** was promoted, ensuring the secure and reliable issuance of invoices, and the **Digital Work Card** was extended across the entire economy, contributing to a significant reduction in undeclared and under-declared work. The **Property Ownership and Management Registry** was also launched, facilitating the swift recording and management of real estate, while **new digital tools were introduced to monitor fuel distribution** and the **e-EFKA** system was upgraded, enabling digital cross-checks of data and simplified procedures for fulfilling social security obligations. In addition, new digital procedures for the termination of business activities for companies and self-employed professionals were implemented, and an automated system for imposing fines for late filings was put into operation.

Pension Control and Payment System – Ilios- Pension expenditure increase in line with the application of indexation rule

In January-June 2026, total pension expenditure (including expenditure of pension funds classified as outside of general government) amounted to €17.1 bn (6.5% of GDP). This implies a 4.2% increase in pension expenditure vis-à-vis the same period in 2025 and this is the combined outcome of the increase in the number of pensioners, the clearance of pension arrear claims and the application of the main pension indexation rule (also partly to those with a personal difference in their pension amount). Indeed, the average main pension in June 2026 was €866 per month, compared to €844 a year earlier, representing a 2.7% increase, consistent with the annual pension uprating of 2.4% applied to 2026 main pensions. The average auxiliary pension was €196 per month, exhibiting a stable pattern since 2020.

1 Flows are derived from changes in outstanding amounts after offsetting foreign exchange valuation differences and reclassifications.

2 The annual growth rate for month t, is the 12-month growth rate for the period ending in month t. It is calculated as the sum of the monthly flows during the most recent 12 months (including t) divided by the outstanding amount at t-12.

3 Private sector deposits comprise the deposits of domestic households, non-financial corporations, insurance companies and other (non-bank) financial institutions.

Bank deposits on a rising path

In 2025 and the start of 2026, the annual growth rate of **private sector bank deposits** accelerated overall reflecting rising economic activity and strong corporate bank credit expansion (Table 6.1 and Charts 38 and 39).

In May 2026, **bank deposits** increased significantly for non-financial corporations (up by €4.6 bn), while household deposits recorded a milder increase (up by €0.3 bn).

The annual growth rate of **corporate bank deposits** accelerated in May 2026 and continued to stand at a high level (20% in May compared with an average growth rate of 5.9% in 2019), while the annual growth rate of **household deposits** stood at 4.1% in May 2026 (compared to 6.1% in 2019). The low level of deposit interest rates has encouraged a significant shift of funds from household deposits into other saving options, such as mutual fund shares, offering considerably higher returns.

1 Bank credit data do not include the amount of loans provided from public funds in the context of loan co-financing schemes ran by institutions such as the Hellenic Development Bank (e.g. TEPIX III loans or My Home loans) or the RRF, but contain only the commercial bank participation in these loans towards NFCs or households.

2 Net credit flows are meant to capture the provision of new loans minus repayments on outstanding loans. They are calculated from changes in outstanding amounts of bank credit to each sector between month t and t-1, after offsetting variations in outstanding amounts that do not arise from transactions but result from revaluations, exchange rate variations, loan write-offs, loan transfer/derecognition from bank balance sheets in the context of NPL management and statistical reclassifications. The annual net flow is the sum of the 12 monthly net flows during each calendar year.

3 The annual rate of change for month t, is the 12-month rate of change for the twelve-month period ending in month t. It is calculated as the sum of monthly net flows during the most recent 12 months (including month t) divided by the outstanding amount at t-12.

Robust corporate loan growth – Housing loans starting to recover

Despite some deceleration in 2026, **corporate bank credit** expansion remains strong under the favourable impact of solid economic growth, lower lending rates and supportive public programmes (Table 6.2 and Chart 40).

In May 2026, **bank credit to NFCs** (based on net credit flows, i.e. intending to provide a measure of new corporate credit minus the repayments of outstanding credit) increased by €0.4 bn and the annual rate of growth accelerated to 9.8% (from 9.5% in April).

The annual rate of change of **housing loans to households**, which turned positive in November 2025 for the first time since 2010, slightly decelerated in May 2026 to 1.2% (Table 6.2 and Chart 41). **Consumer bank loans** have been recording continuously positive annual rates of change already since mid-2022. In May 2026, the annual growth rate of consumer loans stood at 7.0%.

Chart 40: Bank credit to NFCs

(annual growth rate, %)

Source: Bank of Greece.

Chart 41: Bank credit to households

(annual rate of change, %)

Source: Bank of Greece.

The above discussion referred to the net flow of bank credit. To describe developments in new loans without taking into account repayments of past loans, it is noted that in 2025, the volume of new business in bank loans to NFCs as measured by the value of **new corporate term loan agreements**

amounted to €23.6 bn in total, compared to €24.0 bn in 2024 and €17.0 bn in 2023 (Table 6.3 and Chart 42). Regarding households, the value of **new bank housing loan agreements** rose to €2.1 bn in 2025 compared to €1.4 bn in 2024 and €1.2 bn in 2023 respectively (Table 6.3 and Chart 43).

In January-May 2026, new bank corporate term loan agreements reached €7.0 bn (January-May 2025: €6.9 bn), while new housing loan agreements amounted to €1.3 bn (January-May 2025: €0.6 bn) (Charts 42 and 43).

Table 6.3: Volume of new business in bank loans: new loan agreements ^{1, 2, 3}

	2023	2024	2025	2026		
EUR mn				Mar	Apr	May

Source: Bank of Greece.

1 New business volume of loans comprises the nominal value of all new loan agreements with a defined maturity (term loans) signed during the month or the whole year between banks and non-financial corporations or households. More specifically, the new business volume of loans is computed from : (i) all financial contracts that specify for the first time the interest rate of the loan and (ii) all renegotiations of existing performing loan contracts. Not included is credit to NFCs and households without a defined maturity (revolving loans, overdraft facilities, credit cards etc.)

2 In contrast to net credit flows, the above data on the volume of new business in bank loans do not incorporate repayments of outstanding

3 Data on the volume of new bank term loan agreements do not include the amounts of loans provided from public funds in the context of loan co-financing schemes ran by institutions such as the Hellenic Development Bank (e.g. TEPIX III loans or My Home loans) or the RRF. Volumes contain only the commercial bank participation in these loans towards NFCs or households.

According to the sectoral distribution of the outstanding amount of corporate loans in the **AnaCredit dataset**, as of April 2026, the largest shares in outstanding bank loans are encountered in manufacturing (19%), energy (17%), trade (15%), tourism (13%) and storage and transportation (9%) (Chart 44).

Chart 44: Sectoral distribution of bank loans to NFCs – April 2026 (percentage share % of each sector in total outstanding amount of bank loans to NFCs)

Source: Bank of Greece, AnaCredit.

Note: AnaCredit is a common dataset with detailed information on individual bank loans in the euro area. Data concern solely loans to legal persons (corporations).

Chart 45: Bank interest rates (percentages per annum)

Source: Bank of Greece.

Bank lending rates to firms slightly higher in 2026 but well below their 2023 peak

During 2025, **bank lending rates** continued to decline overall in response to the ECB policy rate cuts. Interest rate reductions were larger in the case of new corporate loans compared to new loans to households. After stabilizing in the second half of 2025, bank lending rates in the first months of 2026 have risen slightly for corporate loans, but they edged further down in the case of housing loans.

In May 2026, **bank lending rates** declined mainly for new corporate loans (to 4.29%) and to a lesser extent for new housing loans (to 3.28%) (Table 6.4 and Chart 45).

Table 6.4: Bank interest rates on new loans* and deposits

(end of period, percentages per annum)	2026					
	2023	2024	2025	Mar	Apr	May
Bank lending rate	6.13	5.21	4.21	4.39	4.77	4.65

*Data on bank loan rates do not reflect the concessionary rates charged by institutions such as the Hellenic Development Bank (e.g. TEPIX III loans or My Home loans) or the RRF, on the part of the loan provided from public funds in the context of co-financing schemes. The loan rate in the Table includes only the interest rates charged by commercial banks on bank participation in these loans.

Continued support to bank lending from financial instruments and the RRF

During 2022-2026, credit provision to the economy has been buoyed by the **resources provided**

through the Recovery and Resilience Facility (RRF) of the NGEU, and the implementation of the National Recovery and Resilience Plan (NRRP) “Greece 2.0”. After the approval by the EC of the modified NRRP, total available investment resources reach up to €36 bn, comprising €18.3 bn in grants and €17.7 bn in loans. After the approval of the disbursement of the 6th instalment of RRF funds toward Greece, the total inflow of RRF loan funds amounts to €11.7 bn.

As far as **RRF loans** are concerned, the 29th of May 2026 was the final date for contracting new loans with credit institutions in the context of the loan segment of the NRRP. Signed loan agreements concerned financing investments with a total budget of €29.2 bn (RRF loans: €13.2 bn, bank loans: €9.4 bn, investors’ own participation: €6.6 bn). Disbursements of RRF loans depend on the implementation progress of the investments and are expected to continue until 2029.

In addition, **financial resources**, partly intermediated through local banks, continue being directed to the economy through financial instruments offered **in the context of various European and national initiatives**. Specifically, the Hellenic Development Bank (HDB), the European Investment Bank (EIB) and the European Investment Fund (EIF) co-finance, or guarantee loans extended by commercial banks, mostly to non-financial corporations and secondarily to households. In 2025, **bank loan disbursements to NFCs** supported by these financial instruments amounted to almost €4.0 bn (2024: €3.7bn, 2023: €2.0 bn) representing around 20% of total new bank business loans (approx. 40% of new loans to SMEs).

In Jan.-Apr. 2026 **bank loan disbursements to NFCs** supported by the financial instruments of the HDB, the EIB and the EIF amounted at around €0.73 bn representing 15% of total new bank business loans (more than 25% of new loans to SMEs).

4 = increased/loosened somewhat 5 = increased/loosened significantly

I Bank Lending Survey results for Greece (2026:Q1 compared to 2025:Q4):

Lending terms and conditions tighten for housing loans but ease slightly for corporate loans

In 2026:Q1, Greek banks kept **loan credit standards** unchanged for loans to households, and slightly eased them for corporate loans, compared to 2025:Q4. Lending terms and conditions for loans to NFCs were loosened and a narrowing was reported of the lending margins mainly for average-risk loans. Regarding loans to households, overall terms and conditions remained unchanged for consumer loans but were tightened for housing loans (due to increased non-interest rate charges as the full discount on fee for reviewing and approving mortgage loan applications has been removed).

Greek credit institutions assessed that the **demand for bank credit** by NFCs remained unchanged during 2026:Q1 comparing with 2025:Q4 (after 6 quarters of continuous expansion). According to survey

responses, factors that contributed positively to demand included higher needs for NFCs to finance fixed investments as well as inventories and working capital. On the negative side, NFC debt restructuring and the issuance of company debt securities and equity, decreased loan demand. According to Greek credit institutions, the demand for consumer credit as well as housing loans also remained unchanged during 2026:Q1.

II Survey on the access to finance of enterprises in the euro area (SAFE results for Greek SMEs): January-March 2026 compared to October-December 2025

Table 6.6: Survey on the Access to Finance of Enterprises in the euro area: Greek SMEs

(net percentage of respondents¹)

	Needs		Availability		Approval rate ^{2 3}		Rejection rate ³	
	2025:Q4	2026:Q1	2025:Q4	2026:Q1	2025:Q4	2026:Q1	2025:Q4	2026:Q1
Bank loans	15	9	11	8	53	49	3	14
Credit lines	15	20	6	-2	38	58	6	10

Source: EC/ECB, SAFE.

¹ Net percentage of respondents is defined as the difference between the percentage of firms reporting that needs/availability of bank loans increased and the percentage of firms reporting a decrease.

² Applications satisfied mostly or in full.

³ As a percentage of firms which applied for bank loan/credit line.

Greek SMEs reported still improving bank lending conditions against some moderation in needs and availability of bank loans

The **availability (supply)** of bank loans to SMEs was seen to have expanded by somewhat less in 2026:Q1, while SMEs reported a slight drop in the availability of credit lines (Table 6.6). At the same time, SMEs' **needs (demand)** for bank credit have continued to rise (Chart 48).

Among the **factors affecting the supply of external financing of SMEs**, the influence of the general economic outlook has deteriorated in 2026:Q1. SMEs continued to report overall a positive impact of the factors related to their own creditworthiness, but their role became less supportive especially for

those pertaining to firms' specific outlook and own capital. SMEs indicated a further increase in the willingness of banks to provide credit. SMEs though, continued reporting that their access to public financial support programmes deteriorated.

The percentage of firms which applied for a bank loan declined somewhat q-o-q to 23% (compared to 25% in 2025:Q4). The most common reason for not applying for a bank loan was the high level of internal funds. At the same time firms' discouragement for fear of rejection by the bank increased somewhat at 11% (compared to 9% in 2025:Q4).

As far as the outcome of bank term loan applications is concerned, the approval rate decreased to 49% (compared to 53% in 2025:Q4), while the rejection rate increased to 14% (compared to 3% in 2025:Q4).

Regarding terms and conditions of bank loans, SMEs reported a weaker net decline in the interest rate for bank loans compared to the previous quarter (Chart 49). Greek SMEs continued to report an easing regarding the size and the maturity of available loans but indicated a tightening in collateral requirements and in other costs of the loan.

Chart 48: Change in needs and availability of bank loans to SMEs (*net percentage of respondents*)

* Net percentage is defined as the difference between the percentage of firms reporting that their needs/availability of bank loans increased minus the percentage of firms reporting a decrease.

Market pricing of Greek government bonds follows euro-area developments closely.

In 2025, Greek government bond (GGB) yields rose in tandem with the rise in other euro area (EA) sovereign bond yields; GGBs fared better than EA benchmark bonds, benefitting relatively more from the portfolio repositioning into EA assets. In 2026-to-date, GGBs have moved broadly in line with EA benchmark bonds, amid geopolitical developments that have led to a re-pricing of inflation risk conveyed by rising yields.

GGB yields rose across the curve during the past month, in line with other EA sovereign bonds, as renewed geopolitical tensions in the Middle East pushed up oil prices, EA market-based inflation expectations and market-implied ECB policy rates. The spread of 10-year GGB yields vis-à-vis German benchmark bonds rose slightly, remaining at its bottom historical quartile (Table 7.1 and Chart 50).

The **GGB yield curve** shifted upwards along all tenors, compared to four weeks ago (Chart 51).

Sources: Rating agencies, LSEG and Bank of Greece.

Notes: The table reports long-term issuer ratings. The spread of Greece corresponds to the Greek-10y vs German-10y spread; average spreads across rating categories are calculated, after adjusting for exchange rate risk, vs. the Bund, for EA sovereigns and vs. the UST-10y for all others.

All rating agencies now assign Greece a rating in investment grade...

The **sovereign credit ratings assigned to Greece** have followed an upward trend for a long period of time, almost uninterruptedly since 2015, resulting in regaining the Investment Grade (IG) in 2023 (see Chart 52). Prudent fiscal policies and robust growth rates, which feed into a declining public debt trajectory culminated in the rating upgrades.

Greece is presently rated at BBB by S&P, Fitch, Morningstar-DBRS (all with a stable outlook) and Scope Ratings (with positive outlook), and at Baa3 (/BBB-) by Moody's.

According to the rating agencies, **further upgrades of the sovereign may result** from sustained good economic performance, prudent fiscal policies, a continuation of structural reforms fostering the competitiveness of the Greek economy and a further reduction of banks' stock of non-performing loans (NPLs), with the latter thus moving closer to the EU average.

...while GGBs' pricing is favourable in comparison to other BBB rated sovereign bonds.

Markets price Greek sovereign bonds more favourably than the median of BBB rated sovereign bonds, with the GGB 10-year yield standing firmly in the yield range of single-A rated sovereigns (see Chart 53).

Sources: LSEG, Bank of Greece.

Note: Data on yields of the Greek corporate bonds refer to the yield of the GR NFC bond index of the Bank of Greece (Bloomberg ticker: BOGGRNFC). Data on other euro-area corporate bonds (namely EA NFC BBB-rate bonds and EA liquid HY NFC bonds) correspond to the yields of the indices iBoxx EA BBB NFC and iBoxx EA liquid HY NFC bonds, respectively.

Large Greek NFCs are sustainably funded by international investors...

Bonds issued by Greek non-financial corporations (GCBs) have largely followed the developments in other euro-area corporate bonds (Chart 54). In 2025, Greek companies issued bonds for a total amount of €3.7 bn, raising notably the market-based funding of the non-financial sector companies of the Greek economy (in 2024 total issuances amounted to €2.1 bn). In 2026-to-date, issuance activity continues, with large Greek corporates having tapped the market for a total of €900 mn.

...while their market cost of funding is close to that of BBB rated EA NFCs.

Yields of GCBs rose somewhat over the past month, broadly in line with yields on euro-area corporate bonds (see Table 7.3). GCBs are priced in close connection to EA corporate bonds rated at BBB, despite their on average lower rating; since end-February, GCB yields have increased by 52 bps, a development that is very similar to that of yields on euro-area BBB-rated corporate bonds (+53 bps).

a) Volatility measures are standard deviations of daily returns with a fixed monthly rolling window.

b) Intraday volatility is the range of intraday prices, relative to the closing price.

Share prices of listed Greek companies posted strong positive returns in 2025 as well as in 2026-to-date, in line with the good performance of the economy.

Share prices in the Euronext Athens, as reflected in the ATHEX composite index, recorded a strong positive return in 2025, outperforming euro area counterparts, and remained resilient in 2026-to-date despite higher market volatility globally (Chart 55).

Share prices of Greek listed companies rose slightly over the past month, while euro area equity markets retreated (see Table 7.4), with energy & utilities companies outperforming the general index. Since the outbreak of the war in the Middle East, both the ATHEX index and the broader euro-area stock market have increased, but the rise in the ATHEX index has been stronger (returns since 27 February: ATHEX +8.7%, Euro STOXX +2.4%).

Sources: 1) income statement items, NPE ratio, and CET1 ratio (consolidated data; solo data for NPE ratio): banks' financial statements, ECB, and Bank of Greece, 2) MREL ratio: SRB and banks' financial statements.

Notes: CET1 ratio is the fully loaded CET1 regulatory capital divided by total risk weighted assets. 'CET1' stands for Common Equity Tier 1, 'NPE' for non-performing exposures, 'SIs/LSIs' for significant/less significant banks, 'MREL' for Minimum Requirement for Own Funds and Eligible Liabilities, and 'LCR' for liquidity coverage ratio.

Greek banks entered 2026 on a firm footing, posting resilient profitability despite continued challenges in the external environment.

According to banks' financial results for the first quarter of 2026, the aggregate net income of the four Greek significant banks totaled €1.1 bn, (Chart 56), as stronger net interest income and continued growth in net fees & commissions income were offset by higher operating expenditure and non-recurring expenses (provisions for voluntary exit schemes). The recovery in aggregate net interest income was underpinned, inter alia, by continued strong loan growth amid unchanged policy rates, while the overall cost-to-income ratio remained at low levels. Loan impairment charges declined, in line with past improvements in the bank asset quality. Excluding provisions for one-offs, Greek banks would have posted a modest increase in their 2026:Q1 profitability.

The capital buffers of significant banks strengthened in the first quarter of the year, but the overall CET1 ratio declined due to a relatively larger increase in risk weighed assets, reflecting loan book growth. Banks' capital quality is also expected to benefit from sustained profitability, as plans for an acceleration in deferred tax credit (DTC) amortization materialize. Greek banks' funding and liquidity positions remain solid, and MREL ratios exceed their targets. The aggregate NPE ratio of significant banks dropped modestly from last year, getting closer to the EA average (Chart 57).

Sources: Rating agencies and LSEG. Range of ratings: range of SI's highest long-term rating across rating agencies. For Fitch, S&P, and M.DBRs, the benchmark rating refers to the long-term issuer rating, and for Moody's it refers to the deposit rating.

...and these developments are reflected in improved bank ratings...

Credit ratings of Greek banks continue to benefit from the sovereign's upgrades (see Chart 59). In **January**, S&P revised to positive the outlooks of Greek banks citing greater revenue generation capacity and lower credit risk. In **March**, Moody's changed the outlook for the Greek banking system to stable (from positive), expecting more modest improvements in medium-term financial performance. In **April**, M.DBRs and Moody's proceeded with further upgrades of Greek banks. In **May**, Fitch upgraded the deposit ratings of Greek banks, following an update in its bank rating criteria, and proceeded with further upgrades in **June**, citing improvement in banks' operating environment.

...and resilient market-based cost of funding.

Yields on senior bonds issued by Greek banks rose somewhat in the period under review, broadly in line with EA peers (Chart 58). **Overall, Greek banks' funding costs were unchanged in early 2026** (Chart 60). Deposits costs were broadly stable, while lower interbank borrowing and new bond issuance costs were offset by larger volumes of these higher-yielding funding sources as a share of total funding (Chart 61).

MONEY, CREDIT AND INTEREST RATES

Chart 12: Bank deposits* of non-financial corporations and households (in EUR bn)

*As of December 2016, deposits held in the Consignment Deposits and Loan Fund by the private sector (€4.2 bn) were excluded from the outstanding amount of bank deposits, as the institution has been reclassified from the financial sector to the general government sector. The net flows of deposits are not affected by such reclassifications.

Source: Bank of Greece.

Chart 13: Central bank financing to Greek commercial banks (in EUR bn, end of month)

Source: Bank of Greece.

Chart 14: Bank credit to non-financial corporations and households (annual percentage change %)

Source: Bank of Greece.

Chart 15: Bank interest rates of new loans and deposits to euro area residents (annual percentages, weighted averages of interest rates on the various loan and deposit categories)

* Before June 2014 interest rates agreed in the context of most loan modifications were recorded as interest rates on new lending. As of June 2014, interest rates, if set below market conditions, in the context of loan modifications in response to financial distress of the borrower, are no longer reflected in the series for the bank lending rate.
